Student Enrollment & Course Management System

User Story:

The Student Enrollment & Course Management System is a comprehensive Salesforce application designed to streamline and automate the academic enrollment operations of an educational institute. This system enables administrators, enrollment officers, and instructors to efficiently manage student records, course offerings, enrollments, instructor assignments, approval processes, payments, and reporting—all within a unified Salesforce environment.

1. INTRODUCTION

1.1 Project Overview :

This project aims to centralize all student, course, and enrollment-related data within a single Salesforce application to ensure easy data access, structured workflows, and accurate reporting. The system allows Enrollment Officers to manage student admissions, course registrations, and communication effectively, while instructors and administrators gain full transparency into course allocations and academic progress. The solution also enables automated instructor assignment, task creation, validation checks, and multi-level approval processes for enrollment management.

With Salesforce Flows, Approval Processes, Validation Rules, Reports, and Dashboards, the organization can ensure that all enrollment operations—from admission to course completion—are handled systematically and with continuous monitoring of key performance indicators such as enrollment volume, revenue, student status distribution, and pending approvals.

1.2 Purpose :

The primary purpose of SECMS is to replace manual and fragmented enrollment processes with a scalable, automated, and secure Salesforce solution that ensures:

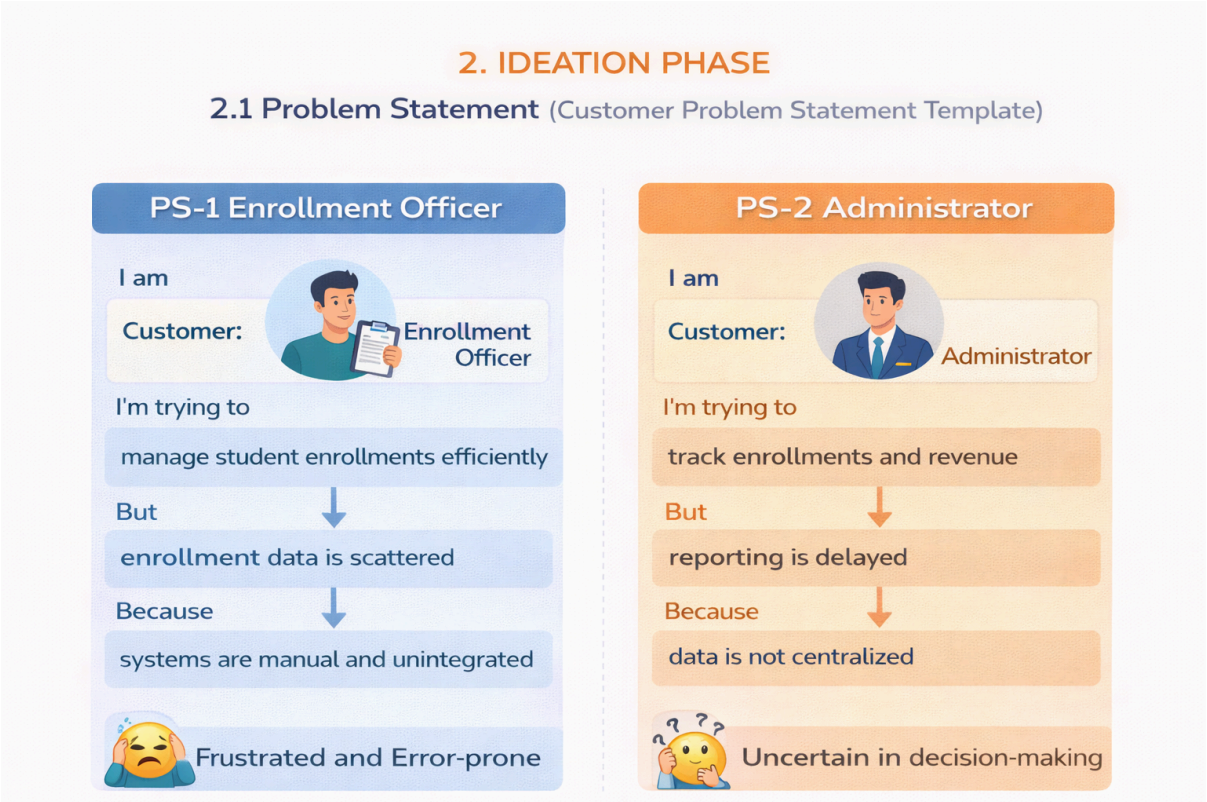

Accurate student data management

Structured enrollment workflows
Automated approvals and validations
Transparent reporting and monitoring

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

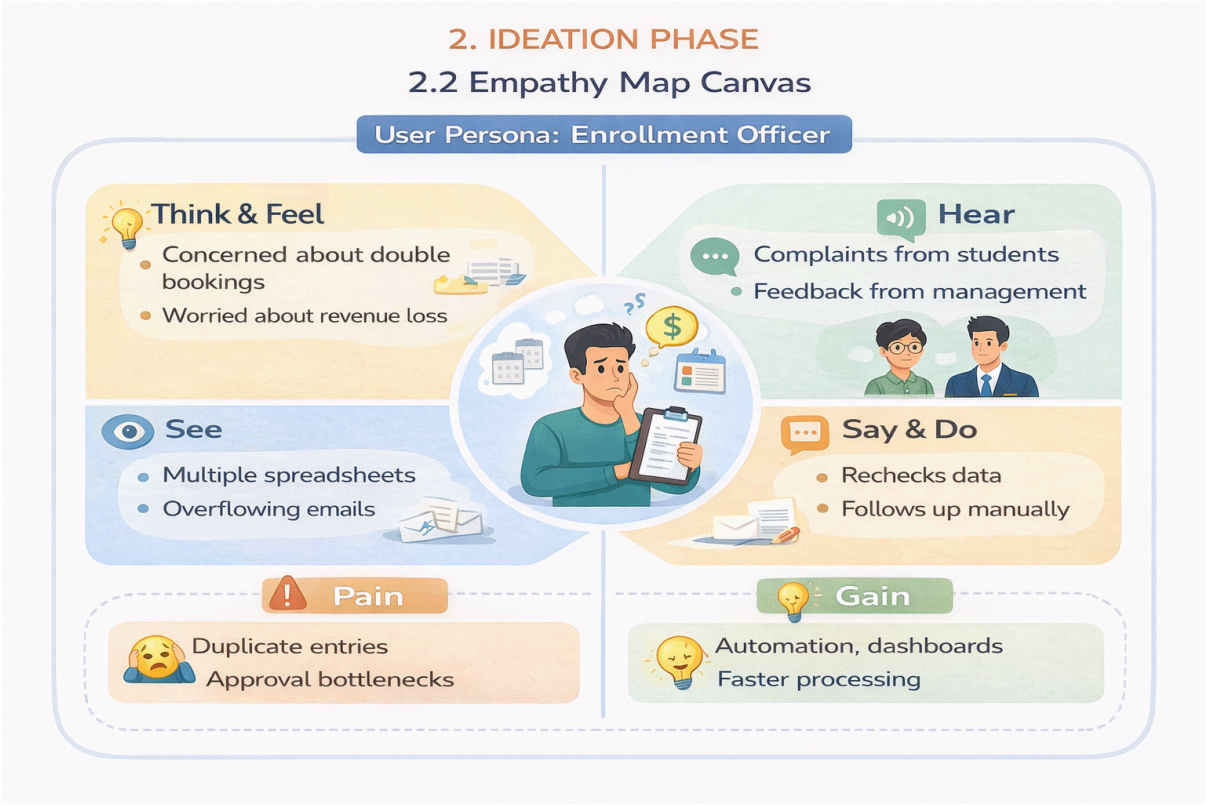

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment Officer	manage student enrollments efficiently	enrollment data is scattered	systems are manual and unintegrated	frustrated and error-prone
PS-2	Administrator	track enrollments and revenue	reporting is delayed	data is not centralized	uncertain in decision-making

2.2 Empathy Map Canvas

User Persona: Enrollment Officer

- **Think & Feel:** Concerned about double bookings and revenue loss
- **Hear:** Complaints from students and management
- **See:** Multiple spreadsheets and emails
- **Say & Do:** Rechecks data, follows up manually
- **Pain:** Duplicate entries, approval bottlenecks
- **Gain:** Automation, dashboards, faster processing

2.3 Brainstorming & Idea Prioritization

Step 1 – Brainstormed Ideas

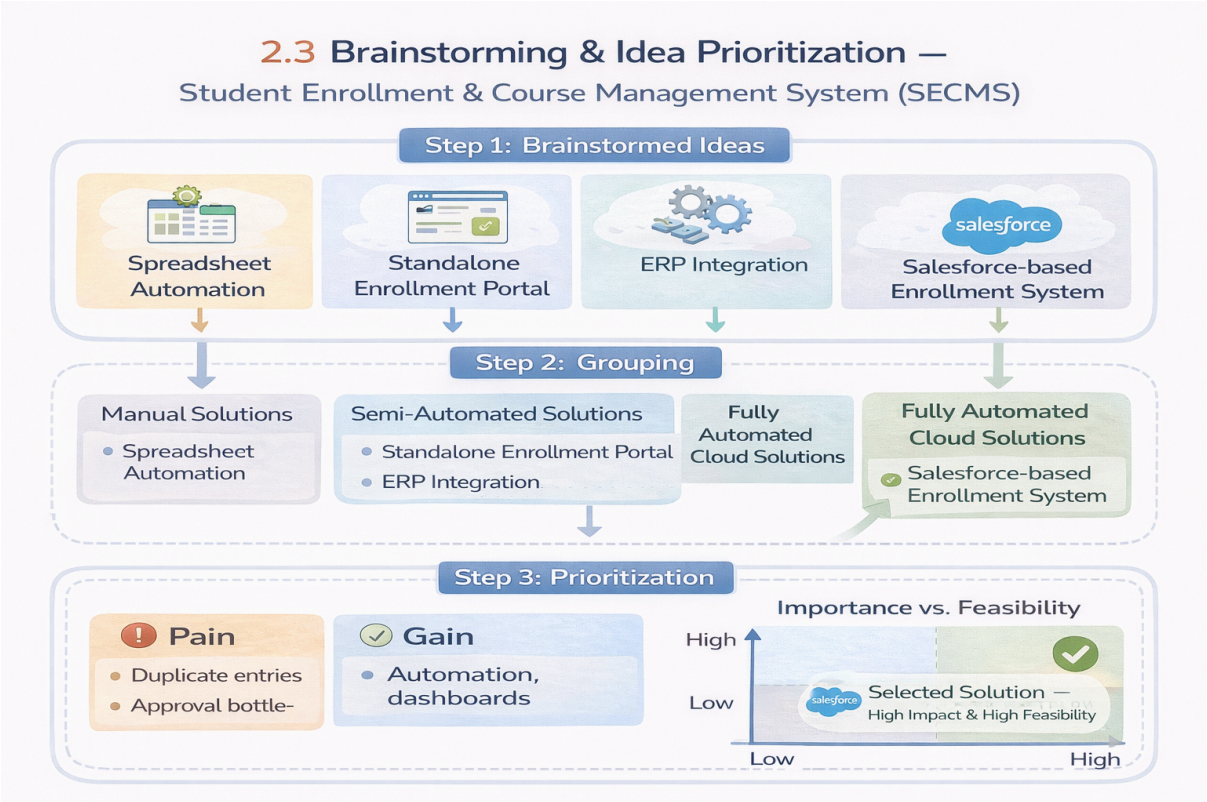

- Spreadsheet automation
- Standalone enrollment portal
- ERP integration
- Salesforce-based enrollment system

Step 2 – Grouping

- Manual solutions
- Semi-automated solutions
- Fully automated cloud solutions

Step 3 – Prioritization

Salesforce-based SECMS was selected due to **high feasibility** and **high impact**.

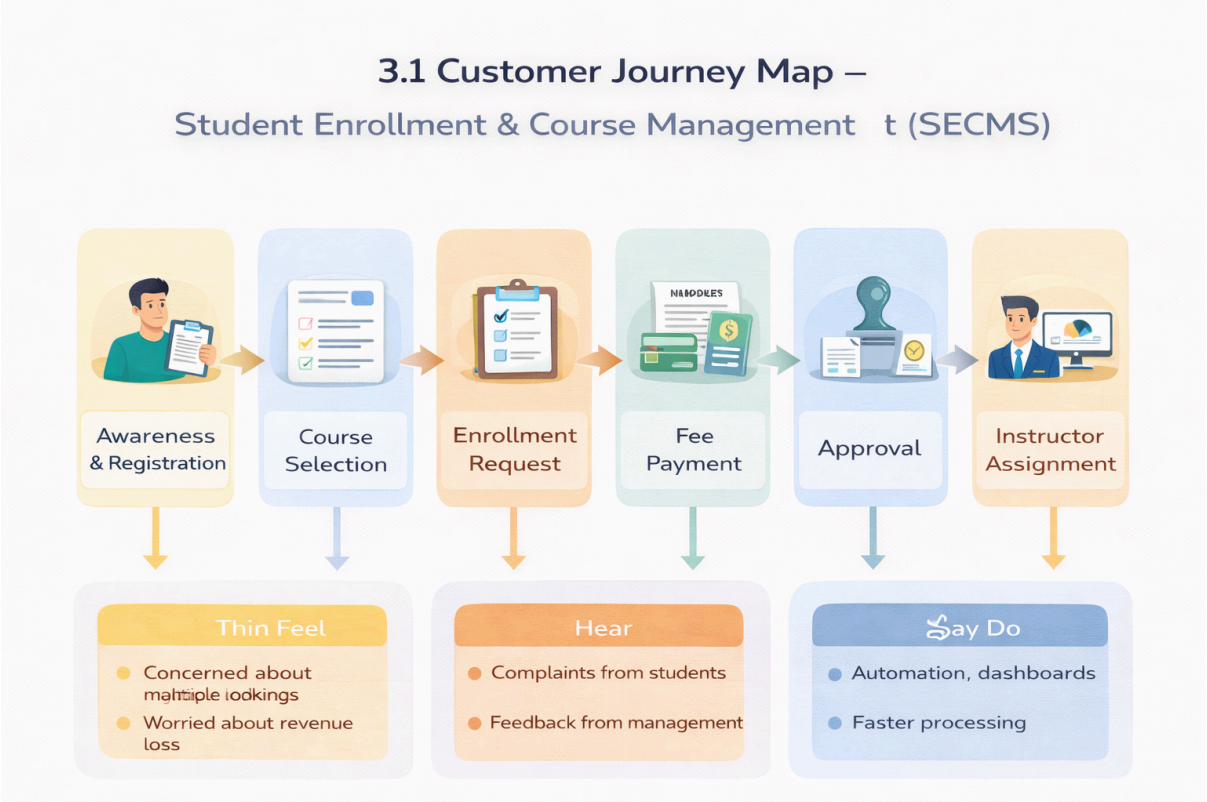

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages covered:

- Awareness & Registration
- Course Selection
- Enrollment Request
- Fee Payment

- Approval
- Instructor Assignment
- Reporting & Completion

3.2 Solution Requirements

Functional Requirements

FR No	Epic	Description
FR-1	Student Management	Manage student records
FR-2	Course Management	Create and manage courses
FR-3	Enrollment Processing	Request, approve, reject enrollments

FR-4	Instructor Assignment	Auto-assign instructors
FR-5	Reporting	Dashboards and reports

Non-Functional Requirements

NFR-1: Usability

The system shall provide a simple, intuitive, and user-friendly interface that enables enrollment officers, administrators, instructors, and students to perform operations efficiently with minimal training. Navigation shall be organized through clearly labeled tabs, dashboards, and forms to reduce user effort and errors.

Examples:

- Quick student registration form
- One-click enrollment approval
- Role-based dashboards

NFR-2: Security

The system shall ensure the confidentiality, integrity, and protection of student and institutional data through secure authentication, authorization, and access controls. Sensitive information such as personal data, enrollment history, and academic records shall only be accessible to authorized users.

Examples:

- Only admins can modify course details
- Instructors view only assigned students
- Students cannot access other student records

NFR-3: Reliability

The system shall operate consistently and accurately without failures during enrollment processing, approvals, and reporting. Automation logic shall execute correctly to avoid duplicate or incorrect enrollments.

Examples:

- No duplicate course registration
- Accurate status updates after approvals
- Consistent report generation

NFR-4: Performance

The system shall provide fast response times for all operations to ensure smooth and uninterrupted user experience, especially during peak admission periods.

Examples:

- Quick dashboard refresh
- Fast search for student records
- No lag during bulk uploads

NFR-5: Scalability

The system shall support future growth in the number of students, courses, departments, and users without degradation in performance or functionality. It shall allow easy addition of new modules and features.

Examples:

- Add new departments without redesign
- Handle increased admissions annually
- Extend to mobile or portal integration

NFR-6: Availability

The system shall be continuously accessible to users during institutional working hours and must minimize downtime. The platform shall support high availability for academic operations.

Examples:

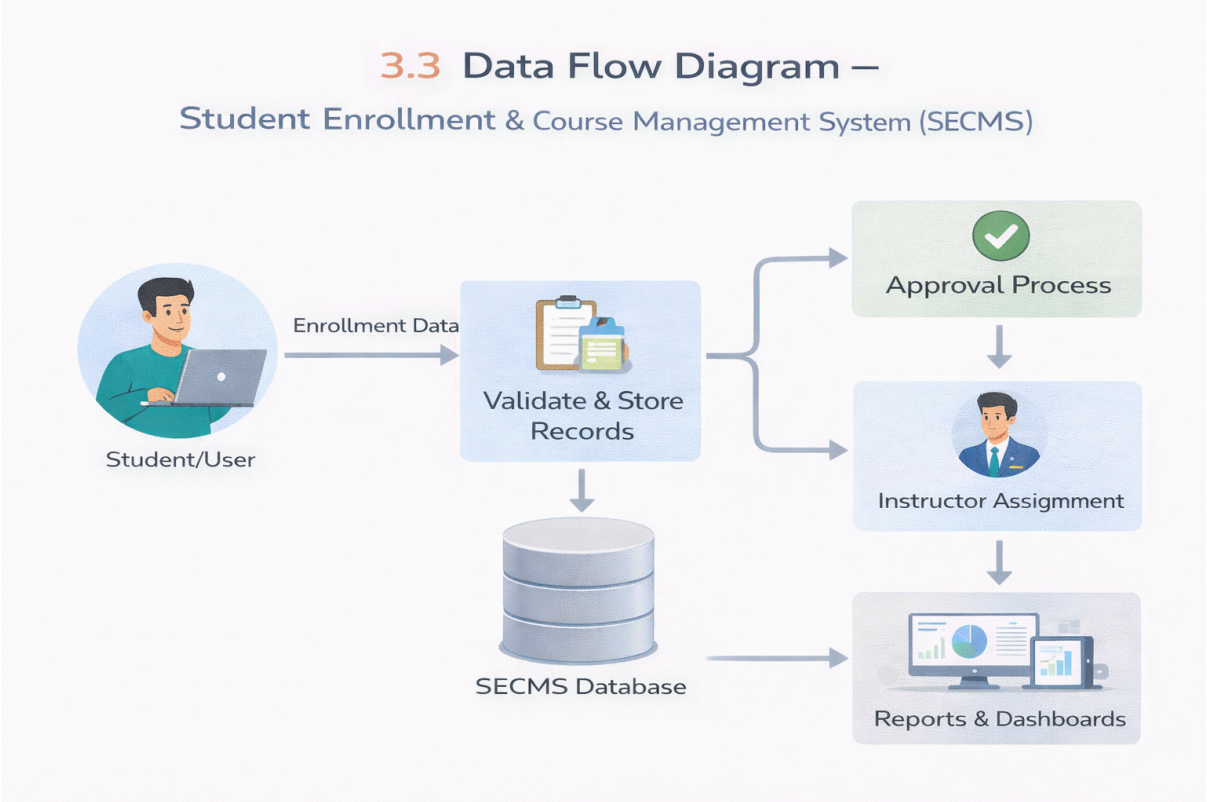

- 24/7 cloud access
- Reliable during peak admission season
- Automatic backup of student records

3.3 Data Flow Diagram

- User inputs student and enrollment data
- System validates and stores records
- Approval process routes data

- Reports and dashboards consume processed data.

The system processes enrollment requests, validates data, routes approvals, assigns instructors, and generates reports.

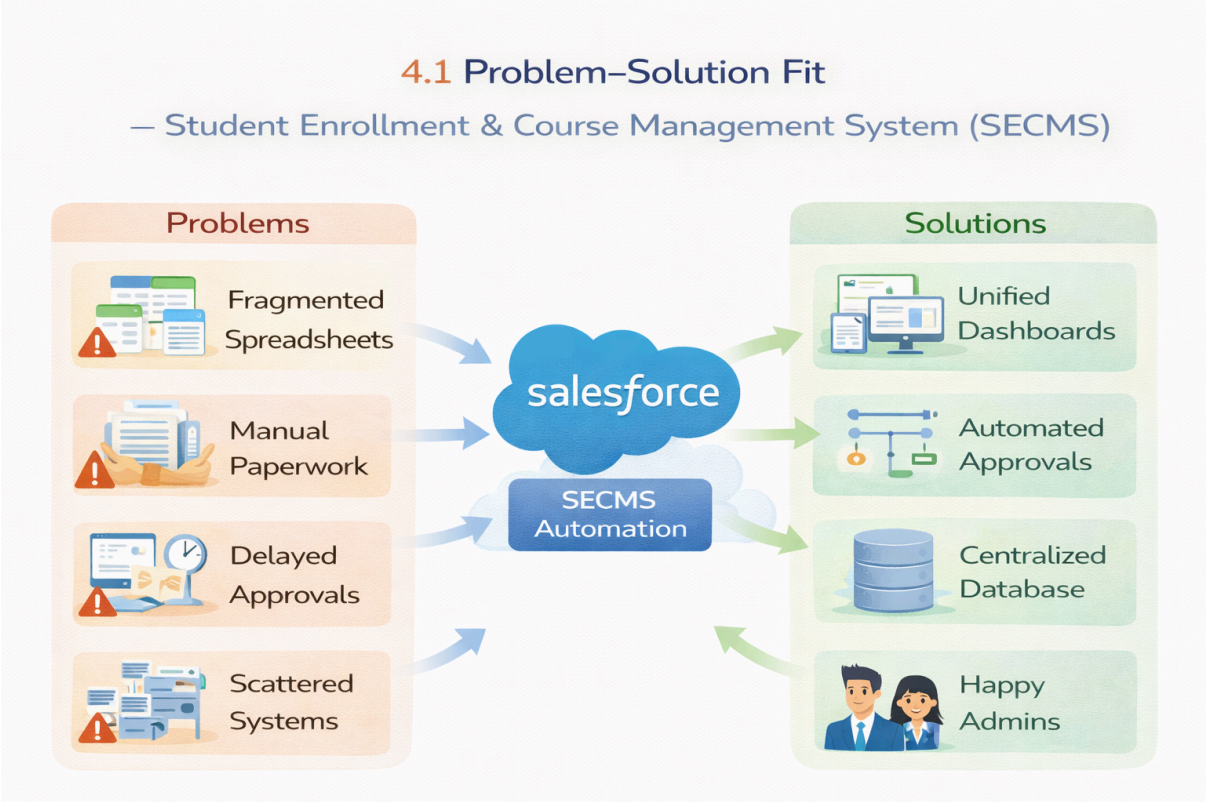

3.4 Technology Stack

Layer	**Technology**
UI	Salesforce Lightning
Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules, Approval Process
Reporting	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

SECMS directly addresses fragmented enrollment workflows by aligning user behavior, constraints, and automation using Salesforce-native capabilities.

4.2 Proposed Solution

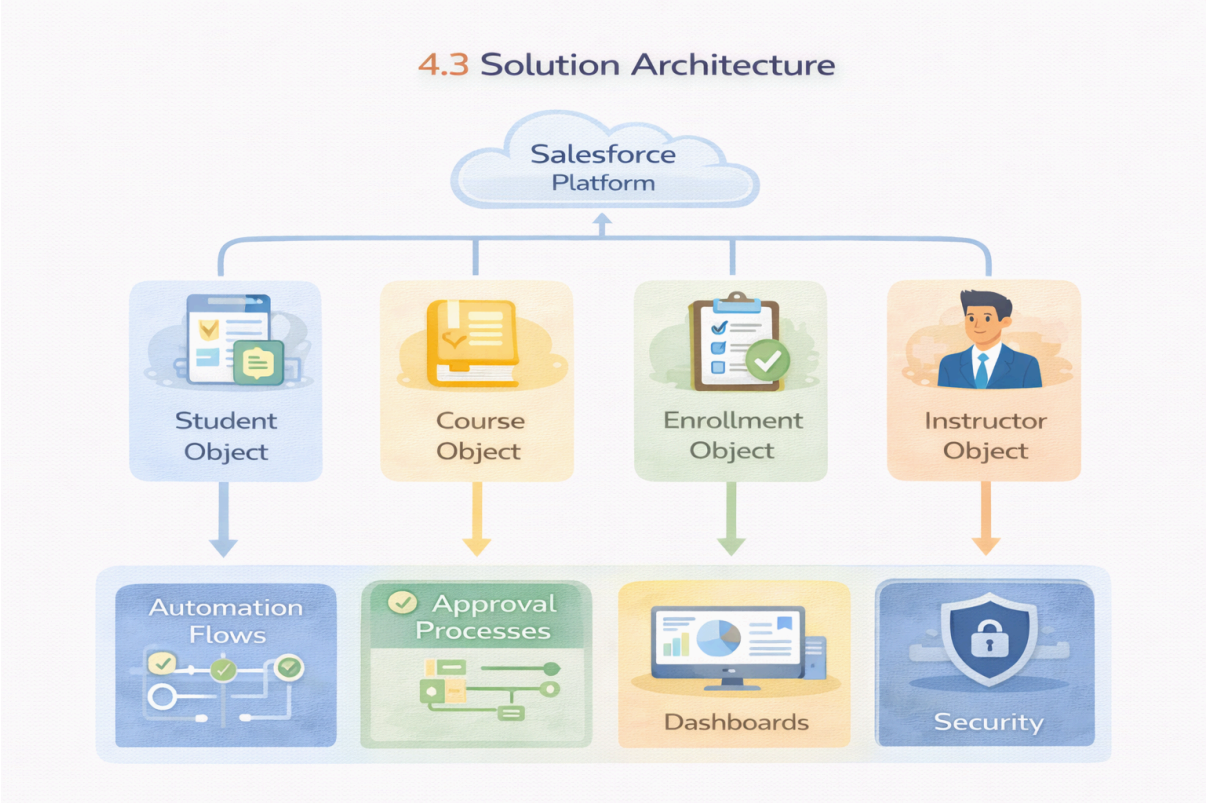

Functional Requirements

Parameter	Description
Problem	Manual enrollment handling
Solution	Salesforce-based SECMS

Novelty	End-to-end automation
Social Impact	Improved student experience
Revenue Model	Institutional deployment
Scalability	Multi-department support

4.3 Solution Architecture

The architecture integrates Salesforce objects, automation flows, approval processes, dashboards, and security layers.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution

- Velocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to create a Salesforce developer account so that I can configure and deploy the Student Enrollment system..	1	High	Member 1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create custom objects for Student, Course, Enrollment, and Instructor so that academic data can be stored and managed efficiently.	3	High	Member 2
Sprint-2	Data Modeling	USN-3	As a user, I want dedicated tabs for each object so that I can easily navigate between students, courses, enrollments, and instructors.	3	High	Member 3
Sprint-2	Data Modeling	USN-4	As an admin, I want to create relevant fields such as student details, course information, and enrollment status so that complete records can be captured accurately.	5	High	Member 4
Sprint-2	Data Modeling	USN-5	As an enrollment officer, I want a centralized Lightning App so that I can access all academic operations from one interface.	3	High	Member 4
Sprint-2	Data Modeling	USN-6	As an admin, I want to define relationships between students, courses, and enrollments so that the system can logically link and track academic activities.	5	Medium	Member 1
Sprint-2	Data Modeling	USN-7	As a user, I want customized page layouts so that only relevant information is displayed, improving clarity and ease of data entry.	5	High	Member 2
Sprint-3	Automation	USN-8	As a system, I want to validate input data such as mandatory fields and enrollment limits so that incorrect or incomplete records are prevented.	3	High	Member 4
Sprint-3	Automation	USN-9	As a system, I want automated flows to handle enrollment processing and notifications so that manual effort is reduced and processes become faster.	3	High	Member 4
Sprint-3	Automation	USN-10	As an administrator, I want an approval process for enrollment requests so that registrations are verified before confirmation.	5	High	Member 1

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-4	Security	USN-11	As an admin, I want to configure role-based security so that users can only access data relevant to their responsibilities.	5	High	Member 2
Sprint-5	Reports	USN-12	As a manager, I want reports on student enrollments, course registrations, and instructor assignments so that I can monitor academic operations.	4	High	Member 3
Sprint-6	Dashboards	USN-13	As a manager, I want visual dashboards showing enrollment statistics and trends so that I can quickly analyze system performance.	4	Medium	Member 4

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

6. Project Development Phase:

Project Flow:

Milestone 1: Salesforce Developer Account Creation

Milestone 2: Custom Object Creation (Student, Course, Enrollment, Instructor)
Milestone 3: Tabs Creation
Milestone 4: Lightning App Creation
Milestone 5: Fields Creation
Milestone 6: Create Relationships
Milestone 7: Page Layout Customization
Milestone 8: Validation Rules
Milestone 9: Flows (Automation)
Milestone 10: Approval Process
Milestone 11: Reports
Milestone 12: Dashboards
Milestone 13: Security Setup
Milestone 14: Conclusion

What you'll learn

1. Real-time Salesforce project implementation
2. Designing custom objects and relationships
3. Creating page layouts & record types
4. Writing validation rules
5. Building automation with flows
6. Creating approval workflows
7. Developing reports & dashboards
8. Setting up security with profiles, permission sets, and sharing
9. End-to-end application testing

Milestone 1-Salesforce :

Introduction:

Are you new to Salesforce? Not sure exactly what it is, or how to use it? Don’t know where you should start on your learning journey? If you’ve answered yes to any of these questions, then you’re in the right place. This module is for you.
Welcome to Salesforce! Salesforce is game-changing technology, with a host of productivity-boosting features, that will help you sell smarter and faster. As you work toward your badge for this module, we’ll take you

through these features and answer the question, “What is Salesforce, anyway?”.

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers. Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud. So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this:

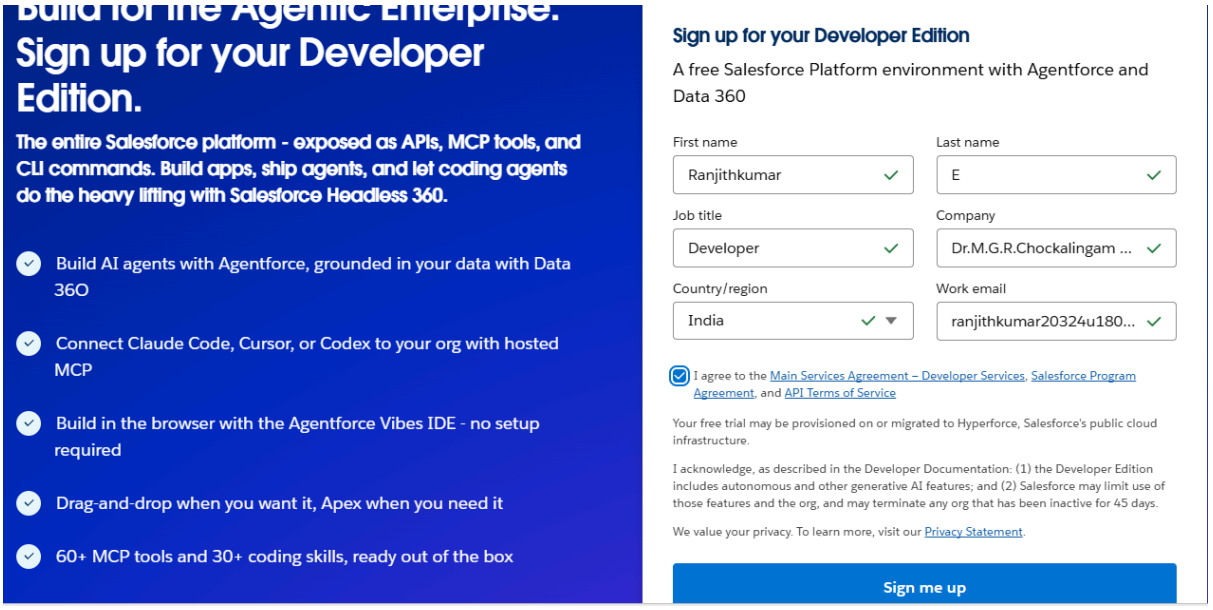

- ## Creating Developer Account:

Description:

Creating a developer org in salesforce.

Go to https://developer.salesforce.com/signup

On the sign up form, enter the following details :

First name & Last name

Email

Role : Developer

Company : College Name

County : India

Postal Code : pin code

Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in the format :

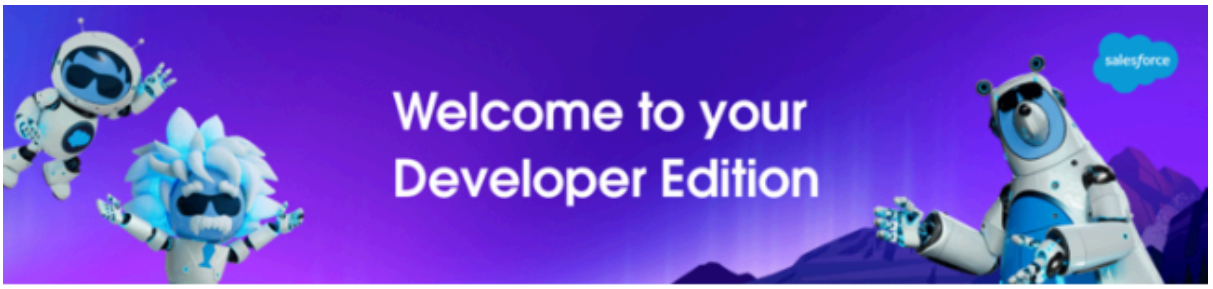

username@organization.com

Click on sign me up after filling these.

Account Activation:

Description:

Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

Hi Ranjithkumar,

Thanks for signing up for a Developer Edition. Now you can start building on Salesforce for free and get hands-on with Agentforce and Data Cloud.

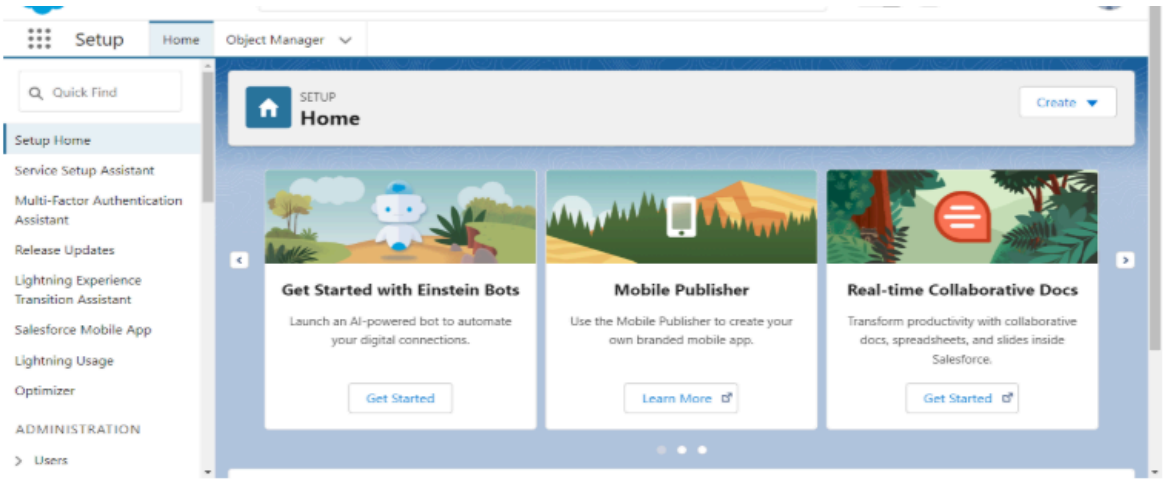

There's just one more step. Use the following link to reset the password for your Developer Edition. This link expires in 24 hours.

Reset Password

To easily log in later, save this URL:

2.Click on Verify Account

3.Give a password and answer a security question and click on change password.

Objects:

Description:

The project is designed using a combination of **standard and custom Salesforce objects** to effectively model and manage the business processes. Each object represents a real-world entity and plays a specific role in the system.

The purpose of creating the Student custom object is to store and manage information about students such as their personal details, contact information, and enrollment status.

To create the Student object:

Go to the Setup page.

Click on Object Manager.

Click on Create → Custom Object.

Enter the details as below:

Label: Student

Plural Label: Students

Object Name: Student

Record Name: Student Name

Data Type: Text

Under Optional Features, select:

Allow Reports

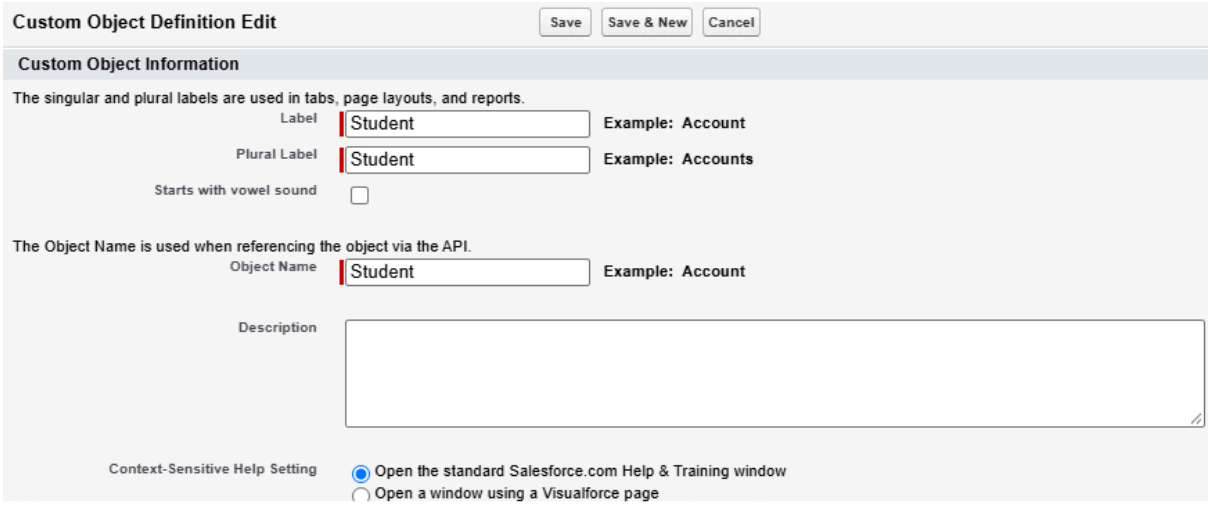

Allow Activities (optional but recommended)

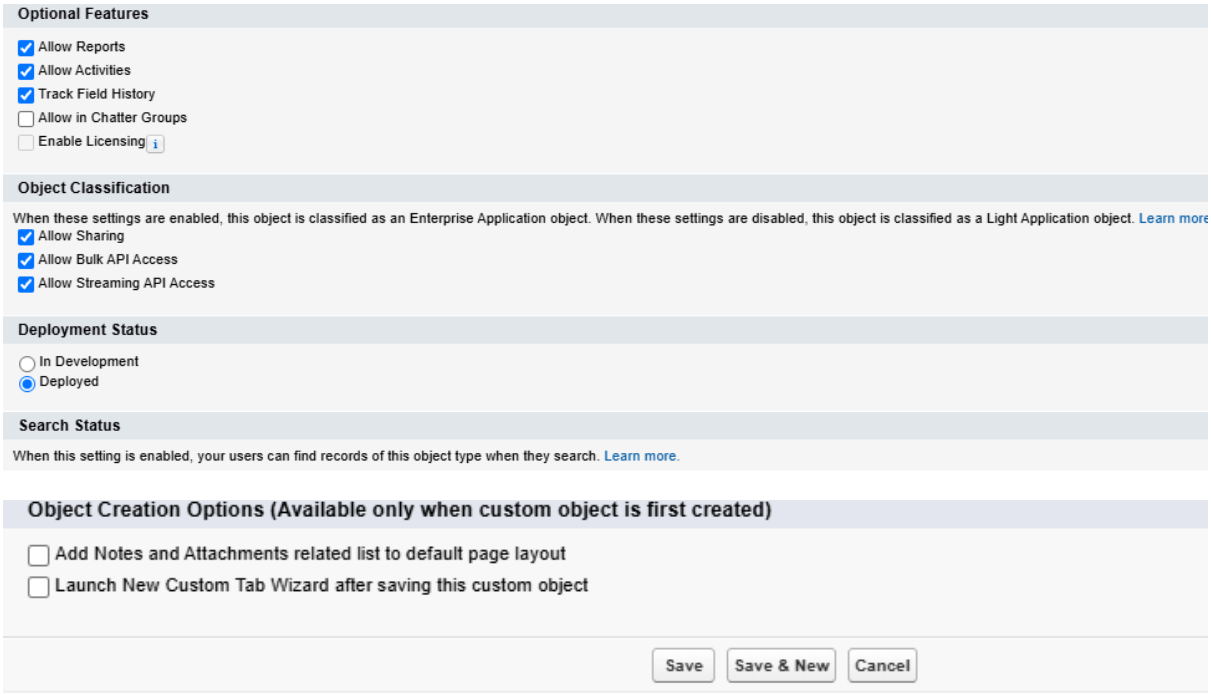

Track Field History (optional, if you want)

Under Search Status, select:

Allow Search

Click Save.

In the same way Create **Courses, Instructors,** and **Enrolments objects**

Fields:

Description:

Fields are used to store specific information within an object. Each field is defined with an appropriate **data type**, **validation**, and **business purpose** to ensure data accuracy and consistency across the system.

- **Student object field:**

Field Label	Data Type
Student Name	Text (Standard)
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist(Active Inactive)

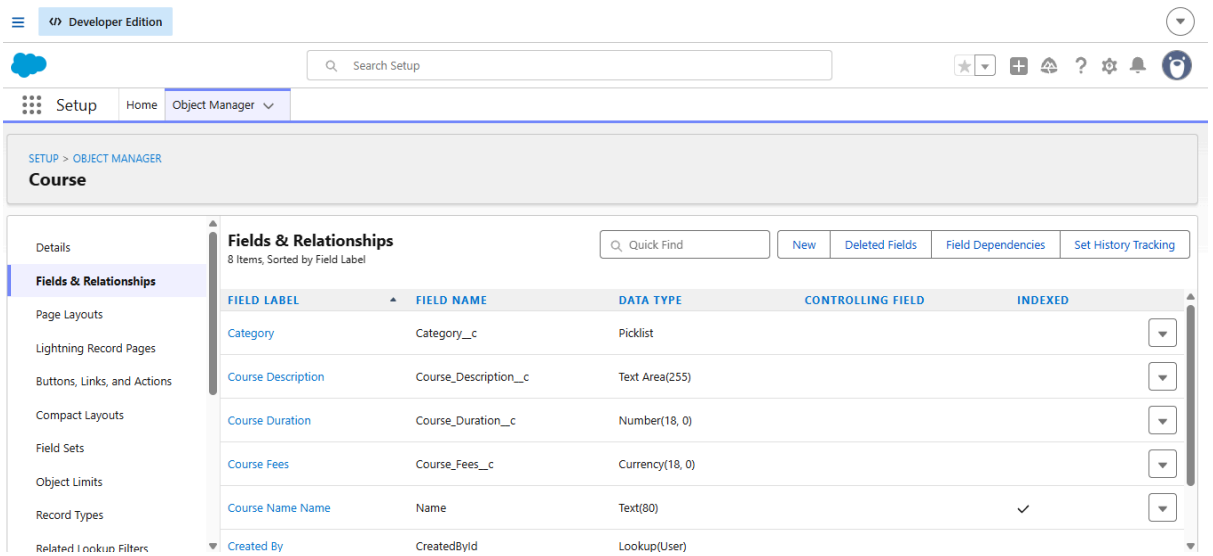

Address	Text Area

- **Course Object Fields:**

Go to Object Manager
Select > Course Object

Click on > Fields & Relationships

Select > fields & relationships

Choose Data type as a 'Text'
label Name > Course Name

Api Name > Auto Populates

Click >next

Click > Save & new

Create remaining Fields as above Step by step

Field Label	Data Type
Course Name	Text (Standard)
Category	Picklist(Beginner, Intermediate, Advanced)

Duration	Number/Text
Course Fee	Currency
Description	Text Area

- **Instructor Object Field:**

Field Label	Data Type
Instructor Name	Text (Standard)
Instructor Code	Text
Expertise	Picklist(Technical, Language, Non- Technica)
Phone	Phone
Email	Email

- **Enrollment Object Field:**

Field Label	Data Type
Student	Lookup (Student)
Course	Lookup (Course)
Instructor	Lookup (Instructor)
Enrollment Date	Date
Enrollment Status	Picklist(Requested, Approved, Rejected)
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

Create Relationships:

Description:
Relationships in Salesforce define how different objects are connected to each other. In this project, relationships are created to ensure **data integrity**, **proper record linking**, and **accurate reporting** across the system.
The project uses **Lookup Relationships** and a **Junction Object** to model real-world interactions between students, courses, and instructors.

- ### Create Lookup from Enrollment to Student:

Description:

1.Go to Setup → click Object Manager.

2.Type Enrollment in Quick Find → click Enrollment__c object.

3.Click Fields & Relationships → click New.

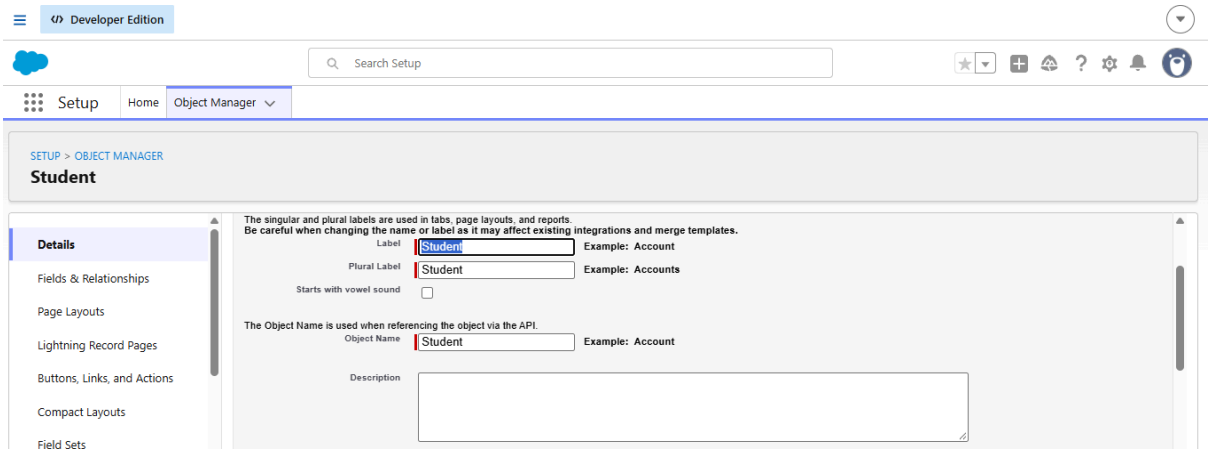

4.Select Lookup Relationship → click Next.

5.For Related To, select Student__c → click Next.

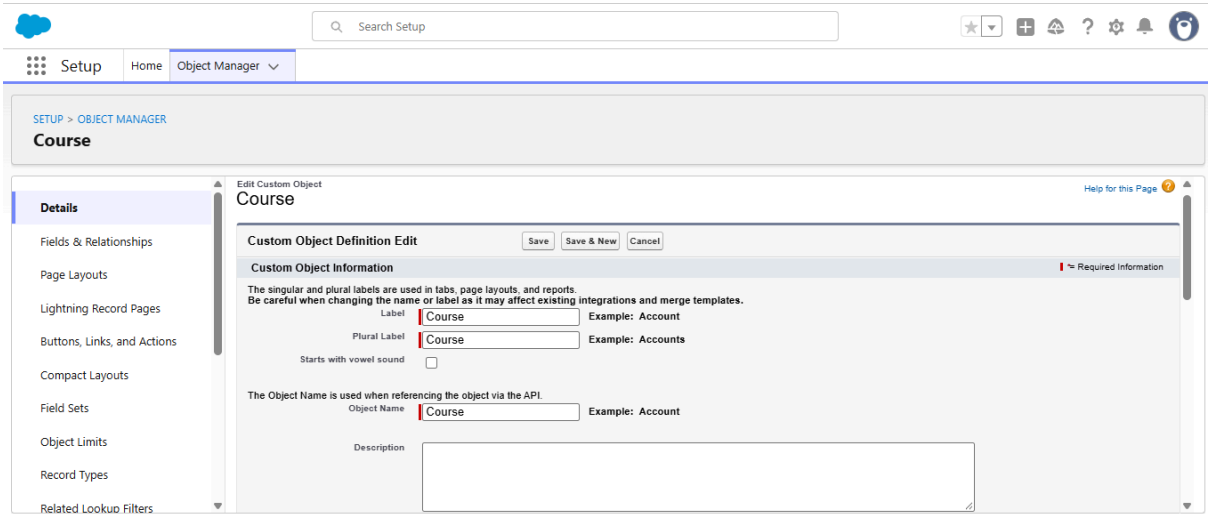

6.Enter Field Label: Student (API Name: Student__c).

7.Click Next through Field-Level Security and Layout options (ensure it's visible and added to layout).

8.Click Save.

-

- **Create Lookup from Enrollment to Instructor:**

Description:

Purpose:

To store which Instructor is assigned to a particular Enrollment.

Steps:

1.Go to Setup → Object Manager → Enrollment__c.

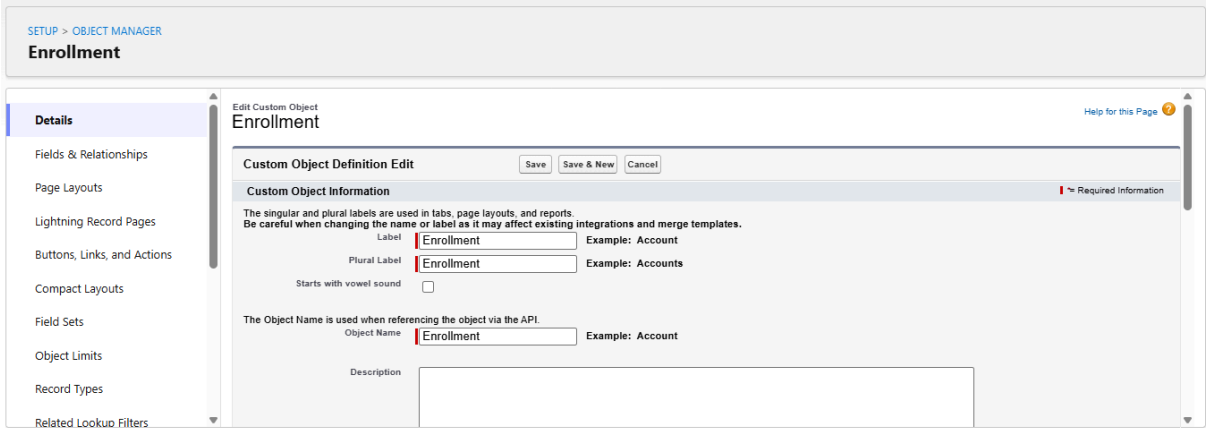

2.Click Fields & Relationships → New.

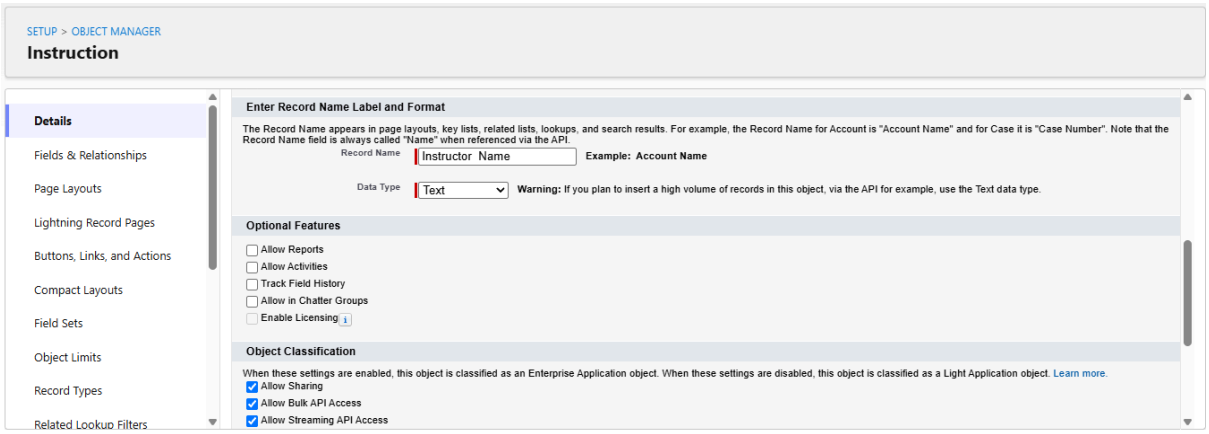

3.Choose Lookup Relationship → Next.

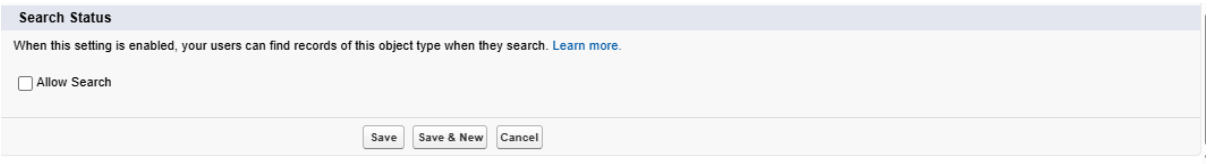

4.Related To: select Instructor__c → Next.

5.Field Label: Instructor (API Name: Instructor__c).

6.Complete Field-Level Security and Page Layout options → Save

Validation Rules:

Description:

Validation rules are used to **enforce business logic** and **maintain data accuracy** by preventing users from saving incorrect or incomplete records. In this project,

validation rules ensure that all critical information is entered correctly and that records follow defined business standards.

- **Student Email Domain Validation:**

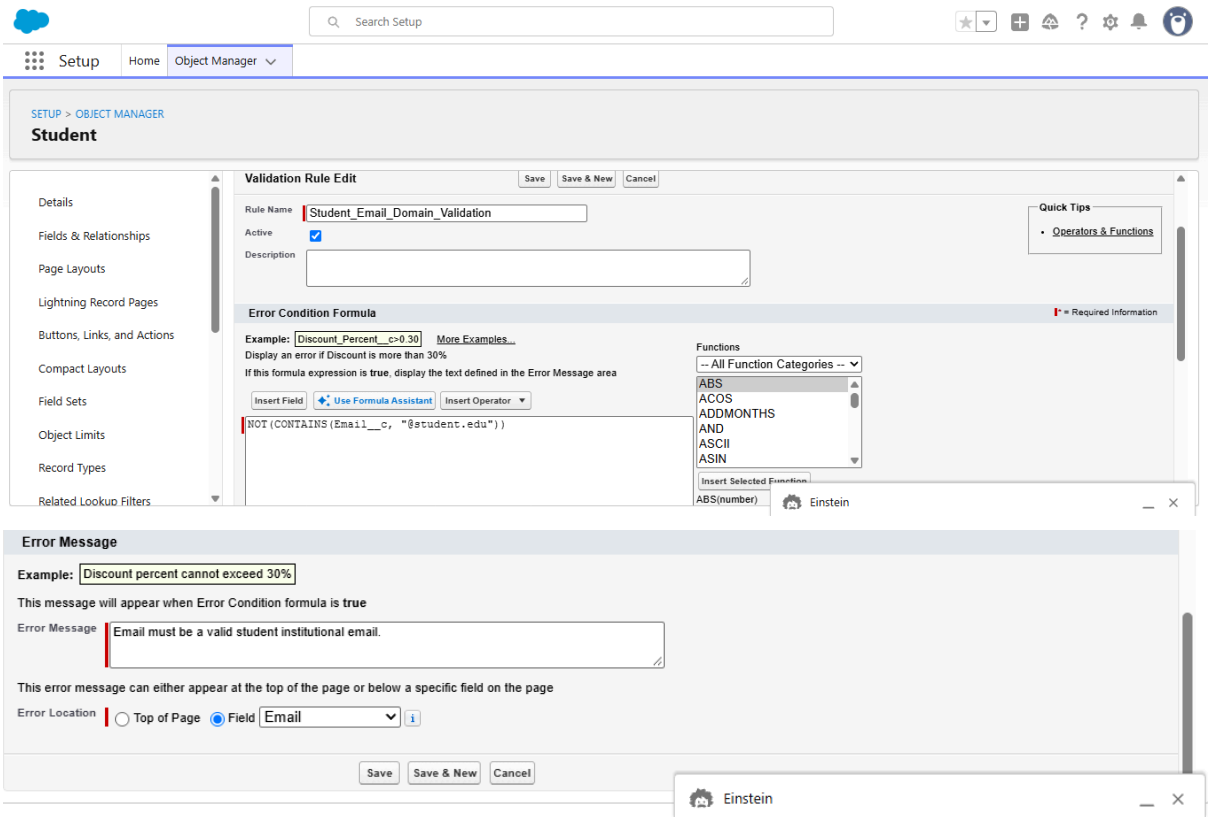

Description

Purpose: To ensure students use only allowed institutional email addresses.

Steps:

Go to Setup → Object Manager → Student__c. Click Validation Rules → New. Rule Name: Student_Email_Domain_Validation. Error Condition Formula: (example for @student.edu) NOT(CONTAINS(Email__c, "@student.edu"))

Error Message: Email must be a valid student institutional email. Error Location: Field → Email__c. Click Save.

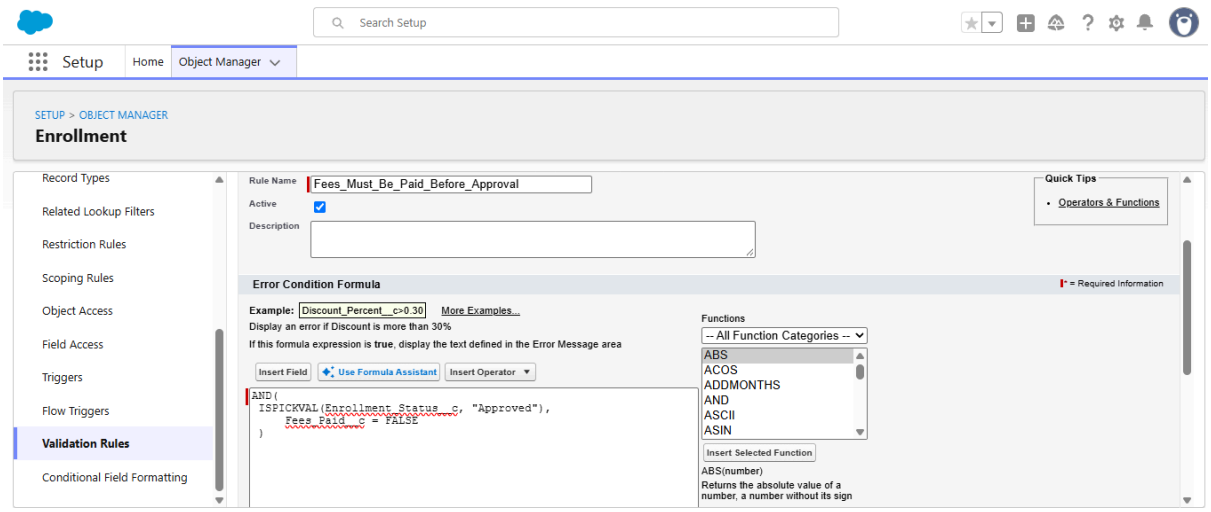

- **Fees Must Be Paid Before Approvel:**

Description:

Purpose: Prevent Enrollment from being approved until fees are paid.

Steps:

Go to Setup → Object Manager → Enrollment__c. Click Validation Rules → New. Rule Name: Fees_Must_Be_Paid_Before_Approval. Error Condition Formula: AND(ISPICKVAL(Enrollment_Status__c, "Approved"), Fees_Paid__c = FALSE) 5.Error Message: Fees must be paid before approving an enrollment. 6.Error Location: Top of Page (or field as needed). Click Save.

Approval Process:

Description:

An Approval Process in Salesforce is used to automate the **record review and authorization workflow** before a critical action is finalized. In this project, the approval process ensures that sensitive or important records are **reviewed, approved, or rejected** by authorized users, thereby maintaining control and compliance.

- **Create Approval Process for Enrollment Requests:**

Description

Purpose: Route Enrollment requests to Training Manager for approval or rejection.

Steps:

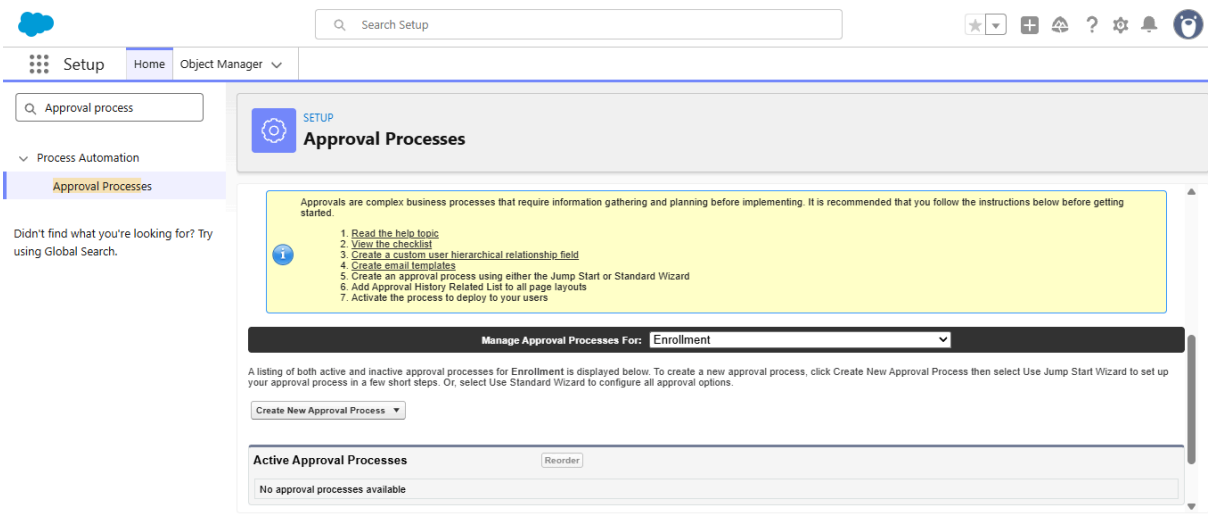

1.Go to Setup → Approval Processes → select Enrollment__c.

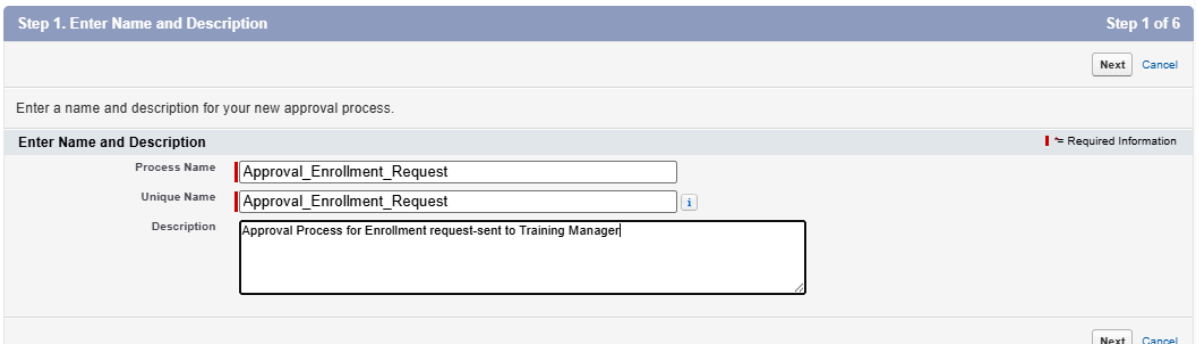

2.Click Create New Approval Process → Use Standard Setup.

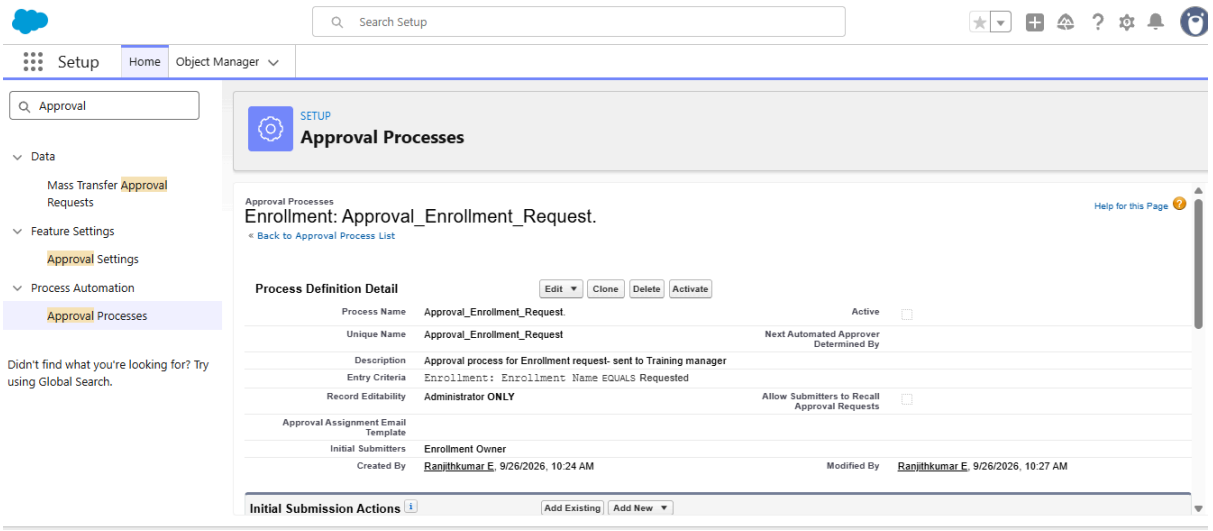

3. Process Name: Approval_Enrollment_Request.

4. Entry Criteria: Enrollment_Status__c = "Requested".

5.Save and configure steps.

6.Activate the approval process.

Tabs:

Description:

Tabs in Salesforce are used to provide **easy navigation** and **quick access** to objects, records, and application features. In this project, tabs are configured to help users efficiently access key modules such as students, courses, enrollments, and instructors without navigating through multiple pages.

- **Creating a Tab for the Student Object**

Description:

1.Go to Setup.

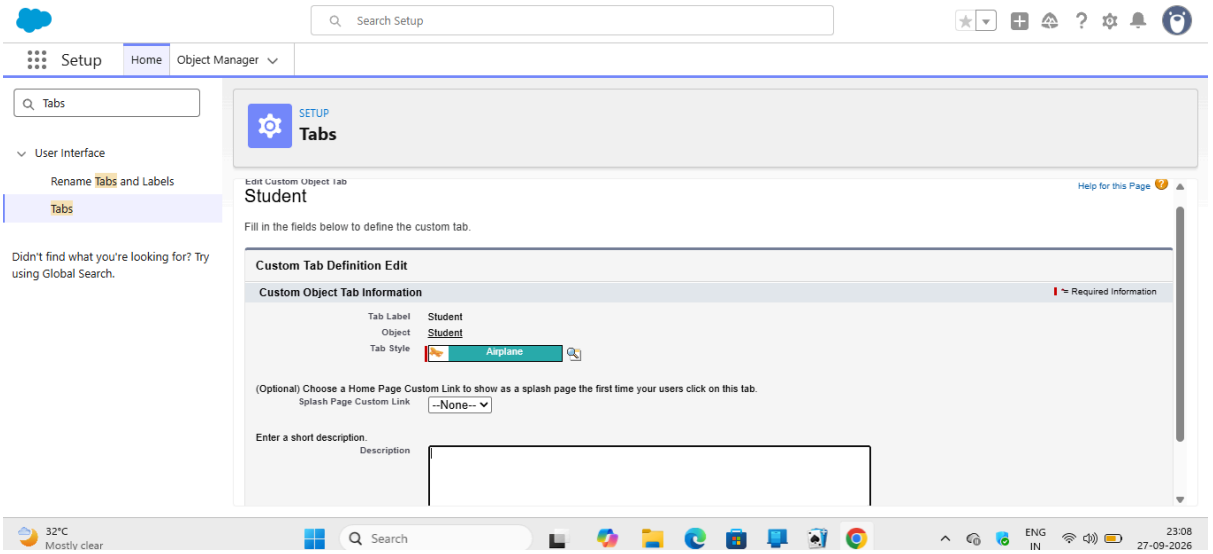

2.In the Quick Find box, type Tabs.

3.Under Custom Object Tabs, click New.

4.Select Student from the object list.

5.Choose a tab style (icon).

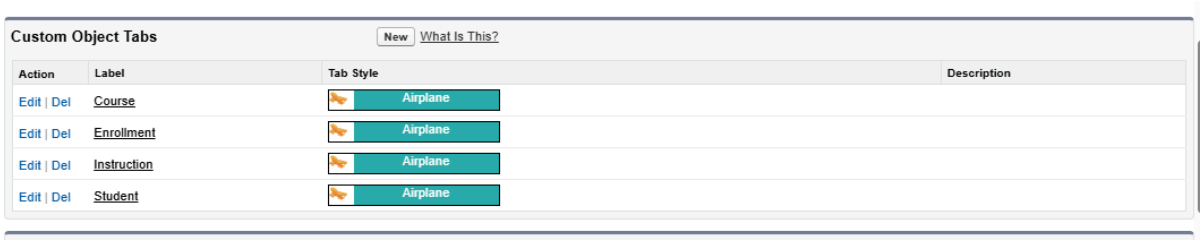

6.Click Next, assign it to all profiles, and then click Save.

Creating Remainning Tabs:

Now create the Tabs for the remaining Objects, they are “Courses, Instructors, Enrollment”.

Follow the same steps as mentioned in Activity -1

The Lightning App:

Description:

A Lightning App in Salesforce is used to provide a **customized workspace** that groups relevant objects, tabs, and features into a single, user-friendly application. In this project, a dedicated Lightning App is created to allow users to efficiently manage student enrollments, courses, and instructors from one centralized interface.

The Lightning App is designed to align with user roles and business processes. It includes only the required tabs and functionalities, reducing clutter and improving navigation. By using a Lightning App, users can perform daily operations such as

creating records, managing enrollments, and monitoring course assignments quickly and efficiently.

- Creating the Lightning Application for the Project:

Description:

1.Navigate to Setup.

2.Enter App Manager in the Quick Find search box.

3.Click New Lightning App.

4.Provide the app details:

5.App Name: Student Enrollment & Course Management

6.Developer Name auto-fills

7.Description: Optional, but can describe the purpose of the app

8.Click Next and choose the following settings:

App Branding (optional): Add logo or select color theme

9.Navigation Style: Choose Standard Navigation

Click Next to select the items (tabs) to be included in the app. Add:

1.Student

2.Course

3.Instructor

4.Enrollment

5.Reports

6.Dashboards

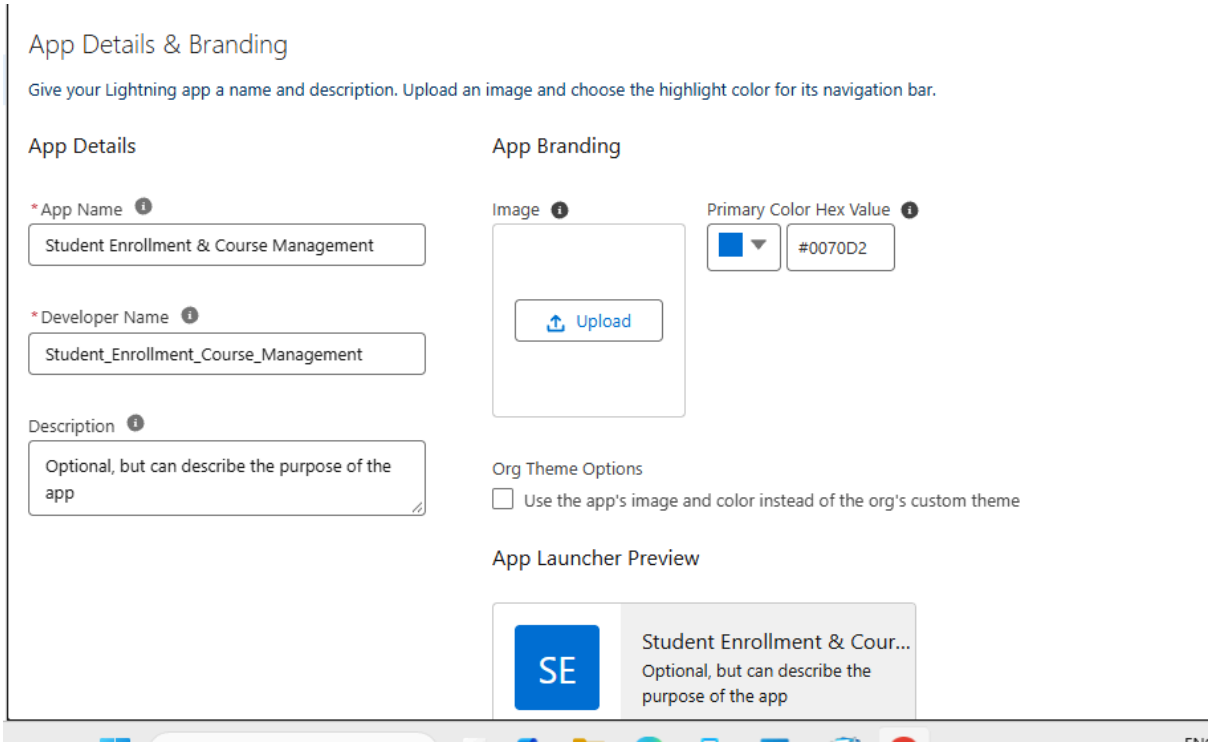

7.Home

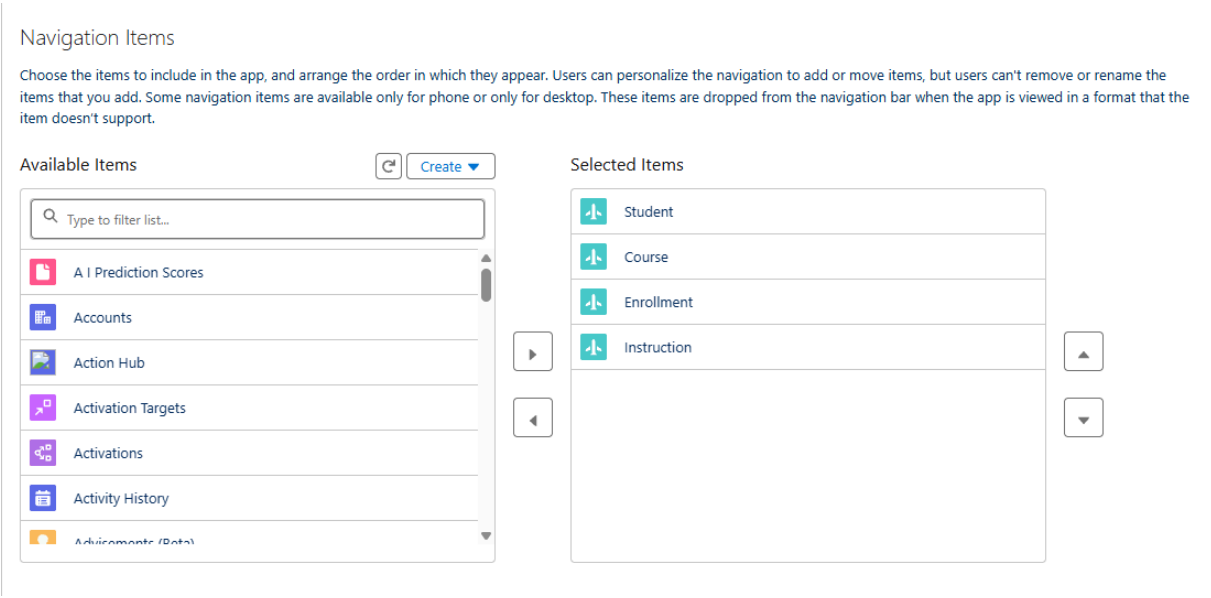

8.Tasks

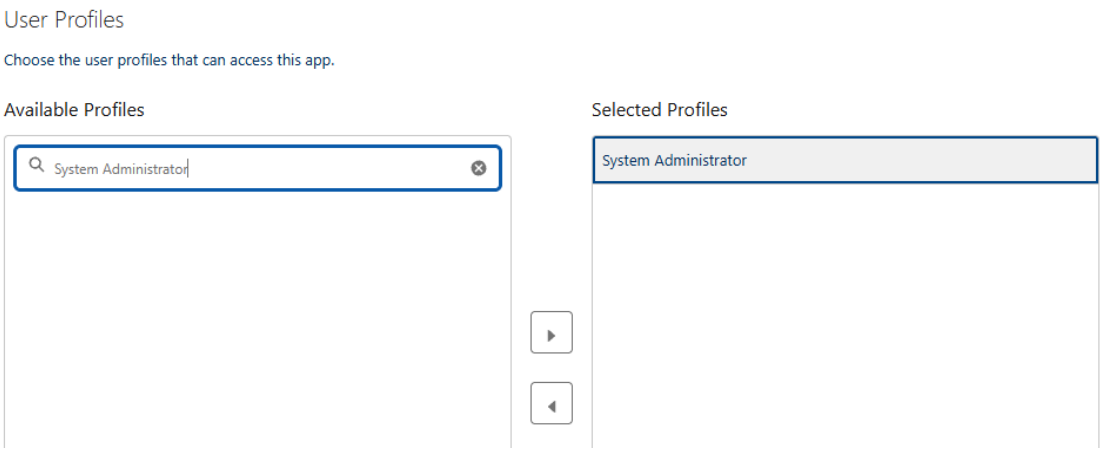

Click Next

Click Next and assign the app to specific profiles (e.g., **System Administrator**, **Admin, Enrollment Officer, Instructor**).

Finally, click Save & Finish.

Page Layouts and Record:

Description

Page Layouts define the **structure and organization of fields, sections, buttons, and related lists** on a record. They ensure that users see only relevant information required for their role.

Purpose

- Display important fields in a logical order
- Control field visibility and edit access
- Reduce data entry errors
- Improve

- ## Create Record Types for Enrollment:

Description:

Purpose:

To separate New Enrollment vs Re-Enrollment processes.

Steps:

1.Go to Setup → Object Manager → Enrollment__c.

2.Click Record Types → New.

3.For the first record type:

Existing Record Type: Master

Record Type Label: New Enrollment

Enable for required profiles (Admin, Enrollment Officer).

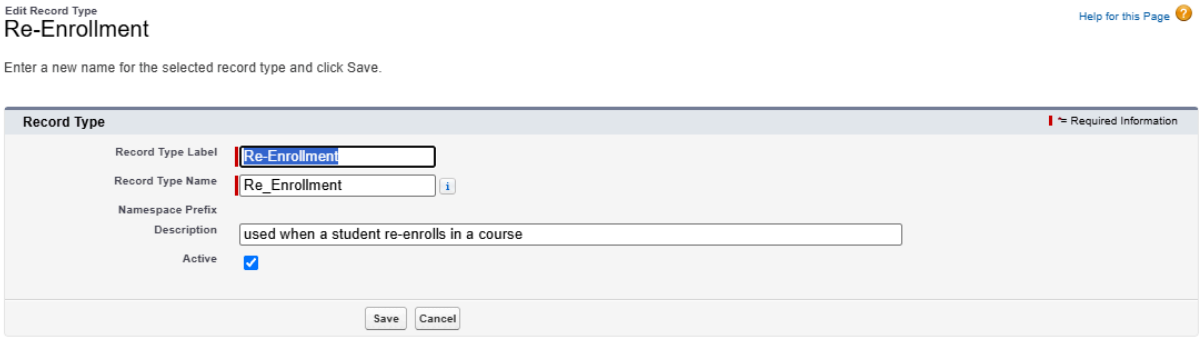

Select the default Page Layout → Save & New.

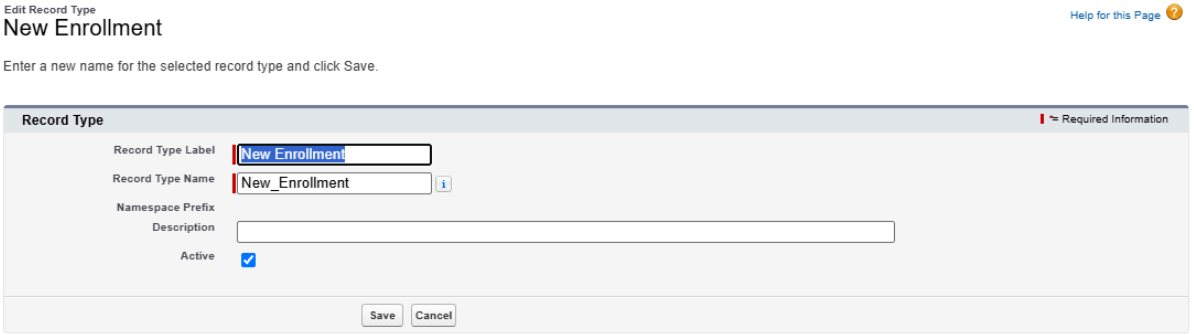

4.For the second record type:

Record Type Label: Re-Enrollment

Enable for same profiles.

Select the default Page Layout → Save.

- **Separate Page Layouts Create for each Enrollment Record Type:**

Description:

Purpose:

To show different fields for New Enrollment vs Re-Enrollment.

Steps:

1.Enrollment__c object → click Page Layouts.

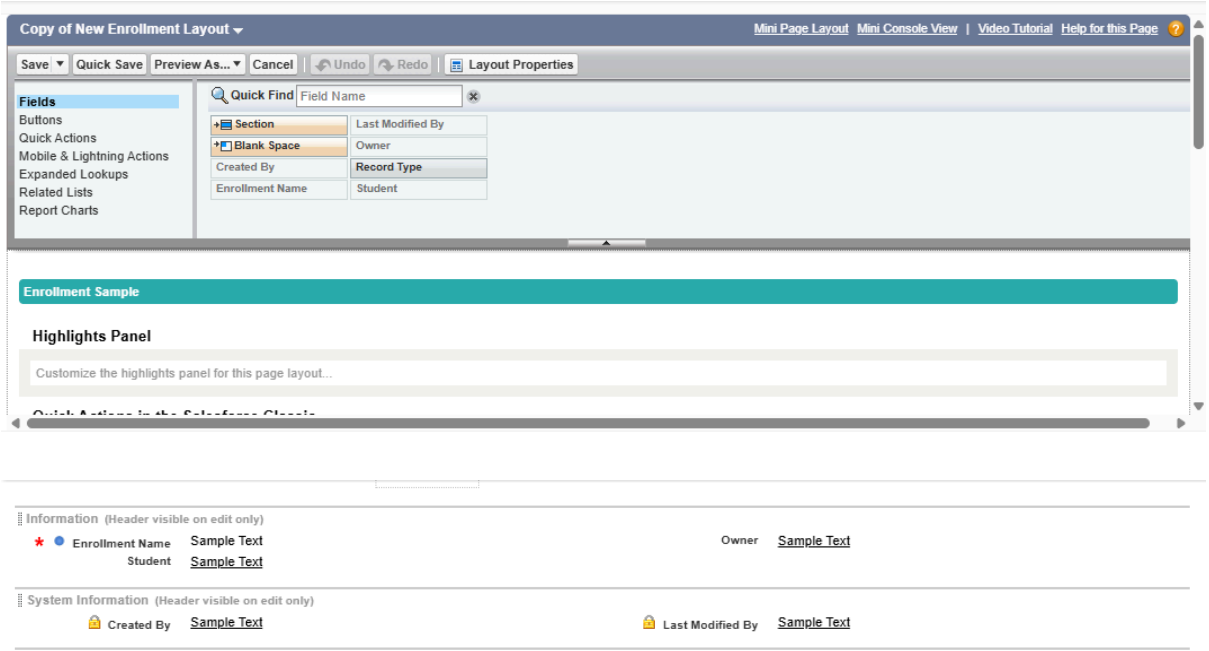

2.Click New to create a layout for New Enrollment:

Clone from existing Enrollment Layout → name it New Enrollment Layout → Save.

Keep fields relevant for first-time enrollment: Student, Course, Instructor, Enrollment Date, Status, Fees, etc.

Remove unnecessary re-enrollment fields if any.

Click Save.

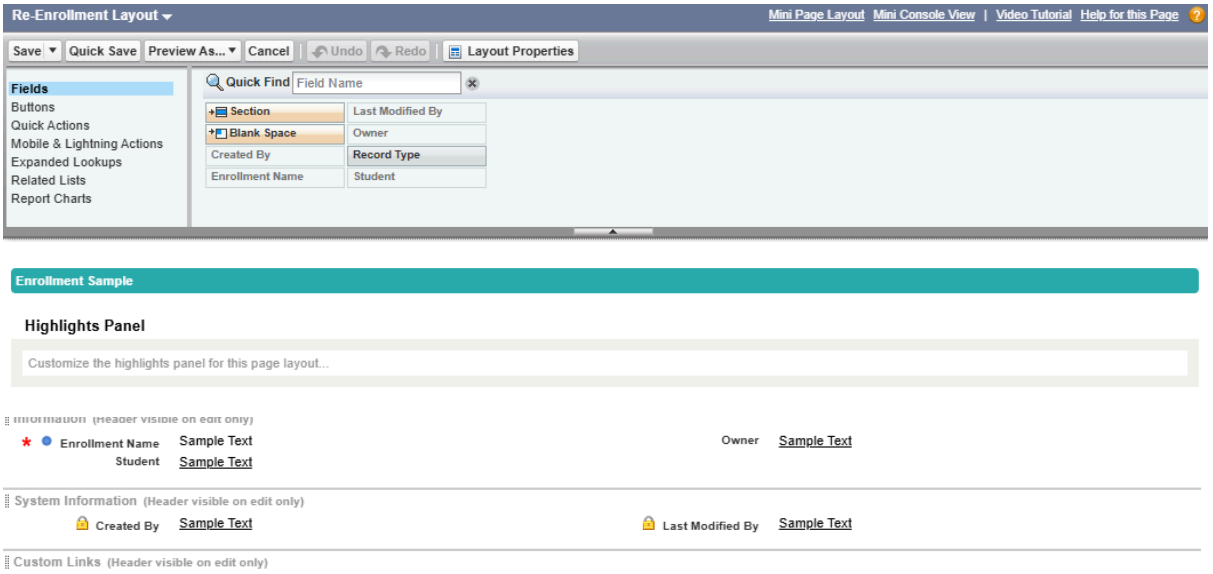

3.Again, click New to create Re-Enrollment Layout:

Clone existing layout → name it Re-Enrollment Layout → Save.

Include fields like previous Enrollment reference (if any), Re-Enrollment Reason, Status, Fees, etc.

Click Save.

4.Click Page Layout Assignment → Edit Assignment.

5.For each profile and record type:

New Enrollment → use New Enrollment Layout.

6.Re-Enrollment → use Re-Enrollment Layout.

Click Save.

- **Enrollment Related Lists to Parent Object:**

Description:

Purpose:

To see all Enrollments from Student, Course, and Instructor records.

a) Student → Enrollment Related List

1.Go to Setup → Object Manager → Student__c.

2.Click Page Layouts → open the main layout.

3.In the palette, select Related Lists.

4.Drag Enrollments related list onto the layout.

Customize columns if needed → Save.

b) Course → Enrollment Related List

Go to Object Manager → Course__c → Page Layouts.

Open layout → add Enrollments related list.

5.Save.

c) Instructor → Enrollment Related List

Go to Object Manager → Instructor__c → Page Layouts.

Open layout → add Enrollments related list.

Save.

Automation with Flow:

Description:

Automation using Salesforce Flow is implemented in this project to **streamline business processes**, reduce manual effort, and ensure consistent data handling. Record-Triggered Flows and Screen Flows are used to automatically perform actions based on predefined conditions.

Flows enable the system to react instantly to record creation or updates, enforcing business rules without user intervention. This improves efficiency, minimizes errors, and ensures that processes are executed uniformly across the application.

- Auto-Populate Enrollment Date (Record-Triggered Flow):

Description:

Purpose: Set Enrollment_Date__c to today when Enrollment is created.

Steps:

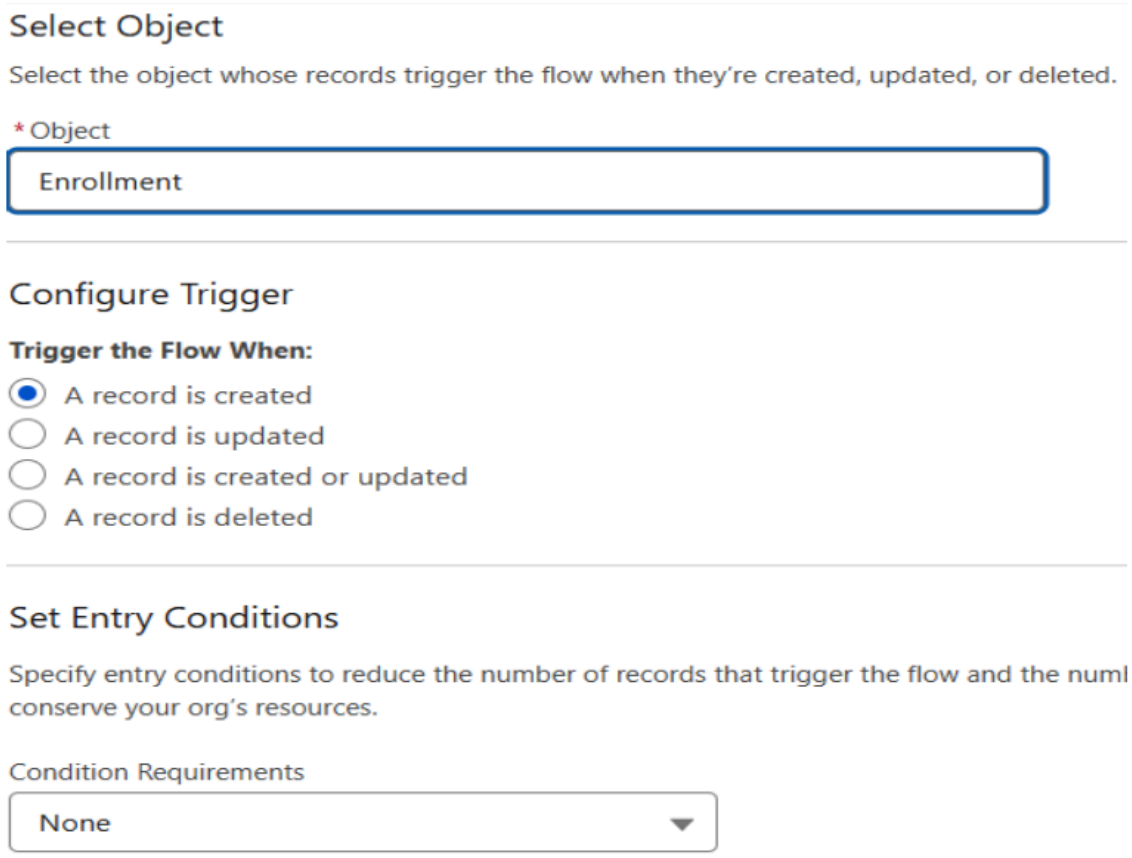

1.Go to Setup → Flows → New Flow.

2.Select Record-Triggered Flow → Create.

3.Object: Enrollment__c.

4.Trigger: A record is created.

5.Optimize for Actions and Related Records → Done.

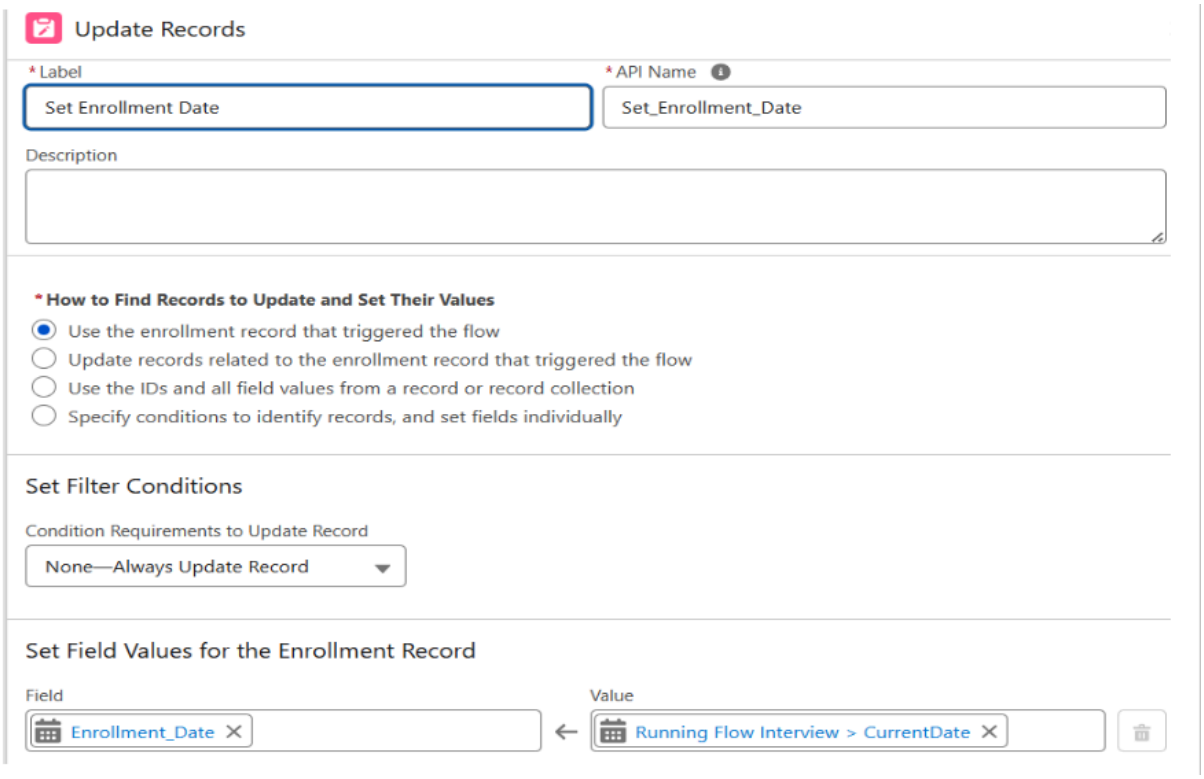

6.Add Update Records element:

Label: Set Enrollment Date.

Use record that triggered the flow.

Field: Enrollment_Date__c→ Value: $Flow.CurrentDate

7.Save as SetEnrollmentDate → Activate

- **Send Email When Enrollment Approve:**

Description:

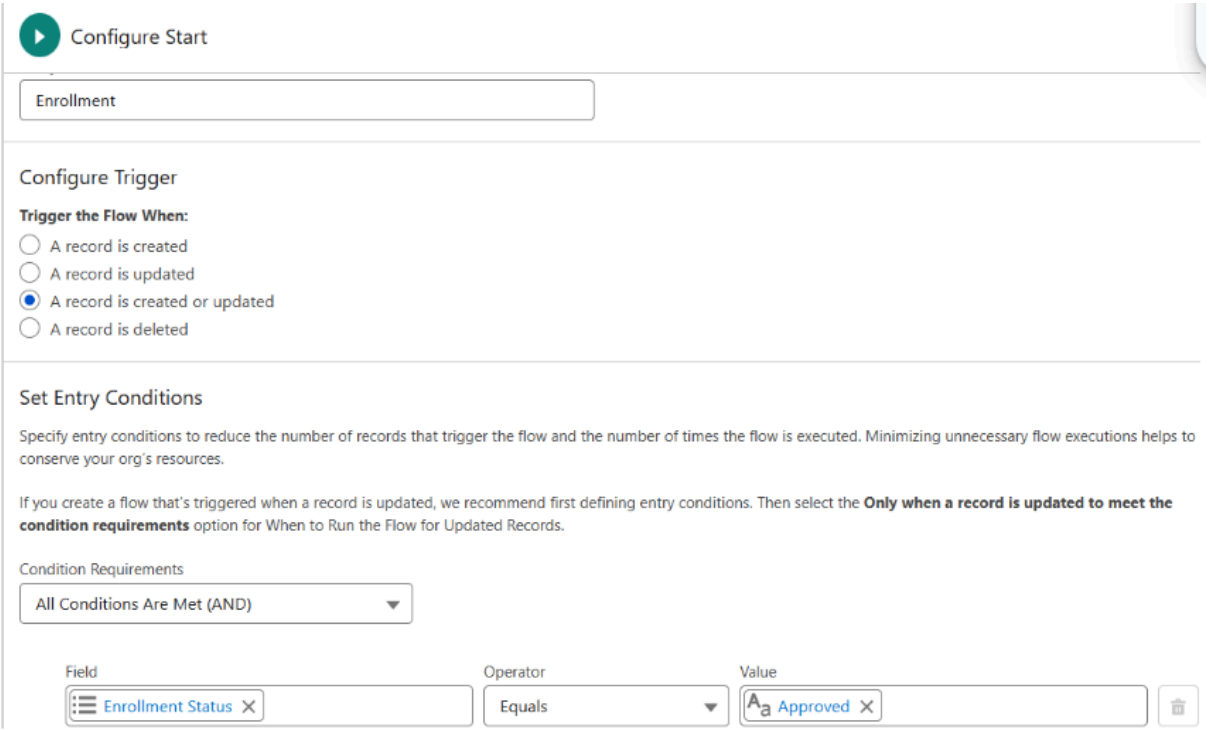

Purpose: When Enrollment_Status__c = Approved, send email, alert admin, and set Student to Active. Steps (high level for document):

1.Create Email Template and Email Alert for student notification.

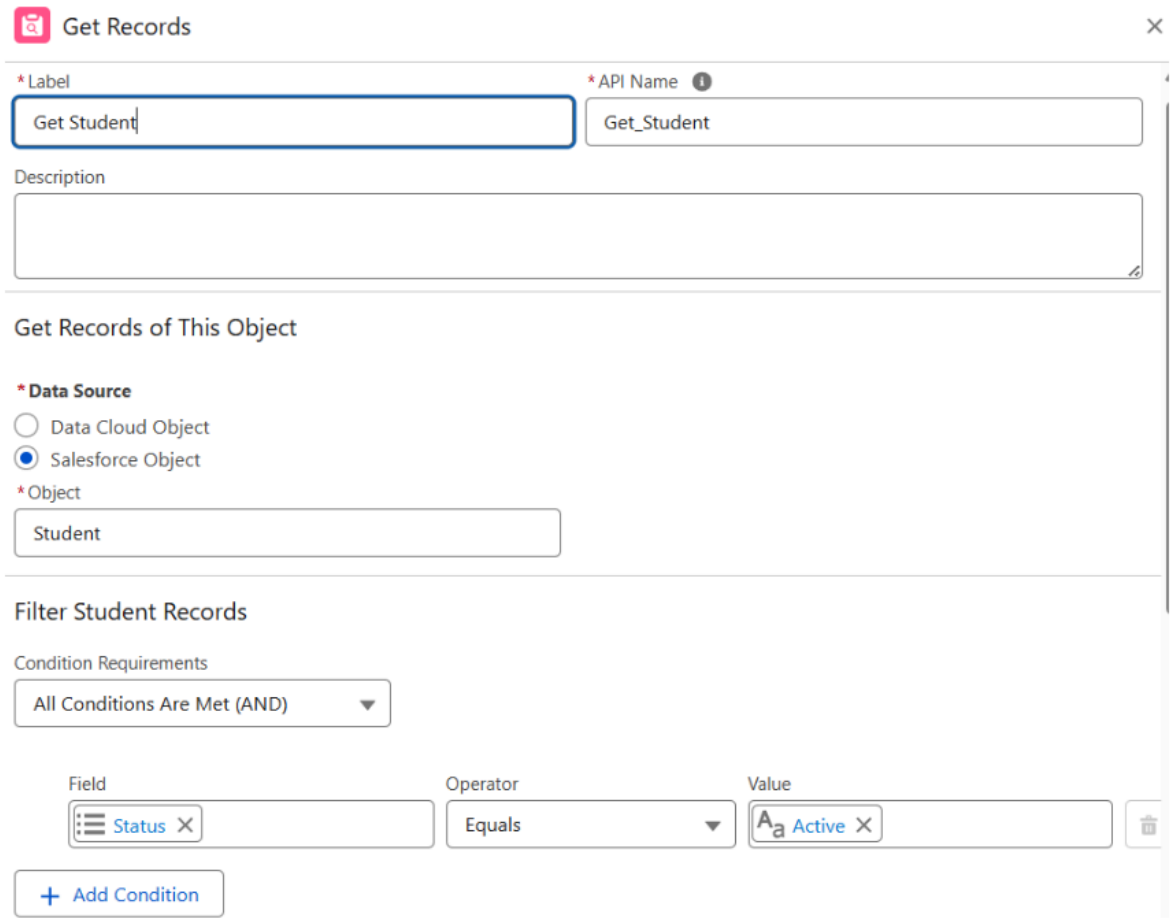

2.Go to Flows → New → Record-Triggered Flow.

3.Object: Enrollment__c, Trigger on update.

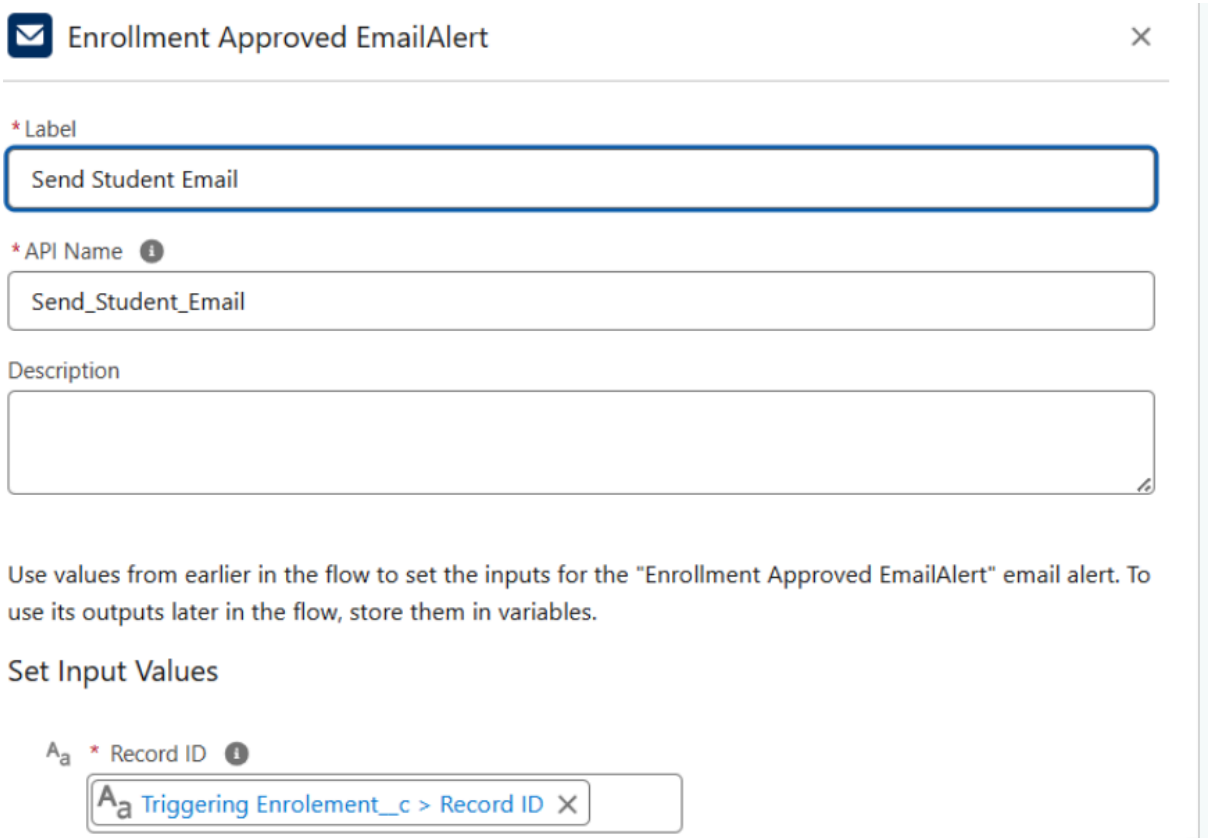

4.Condition: Enrollment_Status__c Equals "Approved".

5.Add Get Records to fetch related Student__c.

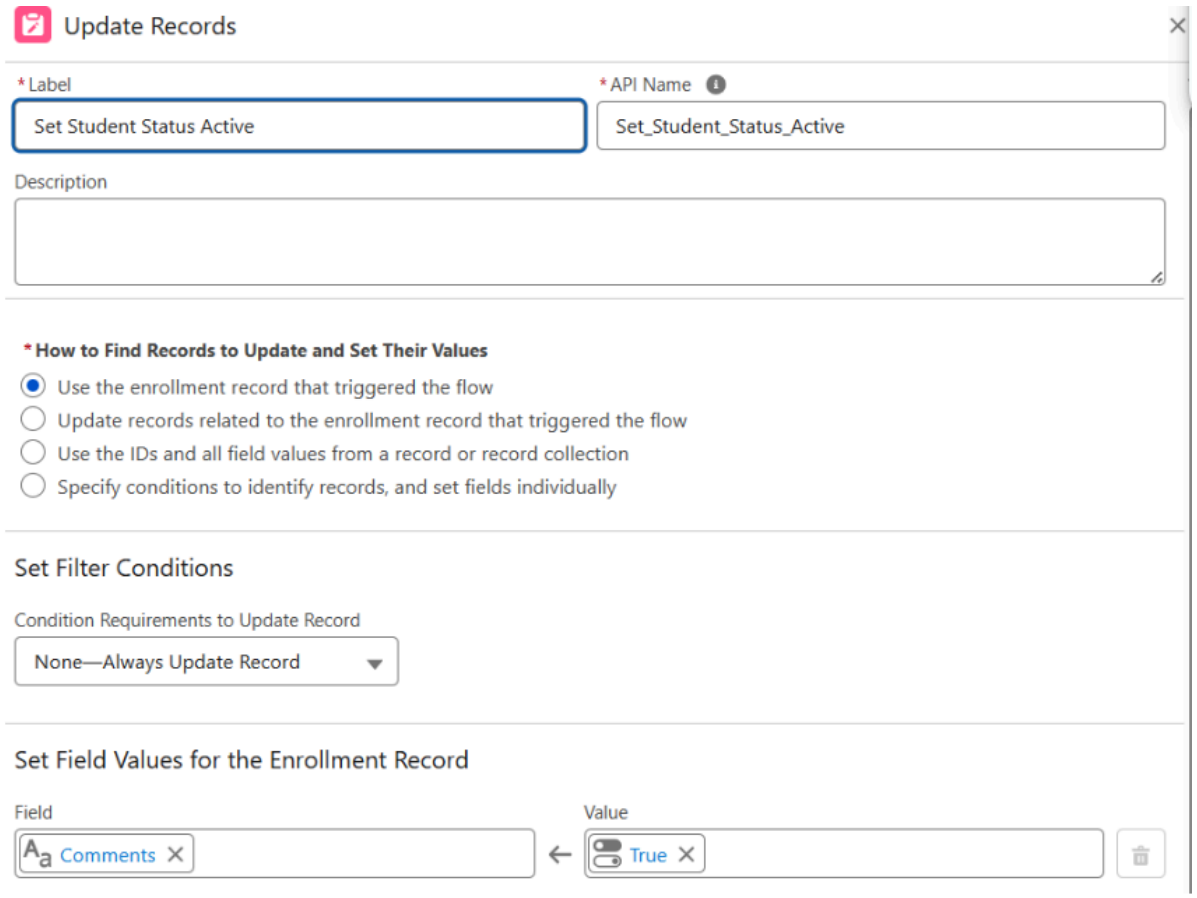

6.Add Action (Email Alert) to send email to student.

7.Add Action to notify Admin if needed.

8.Add Update Records to set Student__c.Status__c = "Active".

9.Save as Enrollment Approved Action → Activate.

- **Auto-Assing instructor Based on course Catrgory:**

Description

Rules:

Technical → Instructor A

Language → Instructor B

Non-Technical → Instructor C

Steps:

1.Prepare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).

2.Create Record-Triggered Flow on Enrollment__c (created/updated).

3.Add Get Records to fetch related Course__c.

4.Add Decision element on Course__r.Category__c:

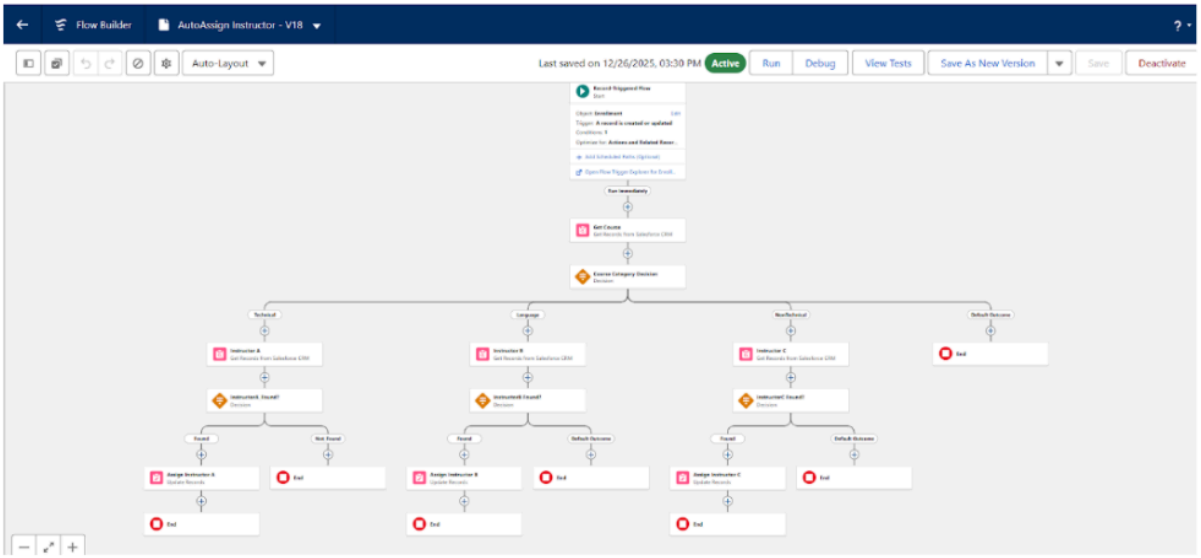

5. Technical / Language / Non-Technical outcomes.

6.For each outcome:

7.Get Instructor record (A/B/C) based on code or name.

8.Update Records: set Instructor__c = Get_Instructor_X.Id.

9.Save as AutoAssign_Instructor → Activate.

- **Auto-Create Task For Follow-Up:**

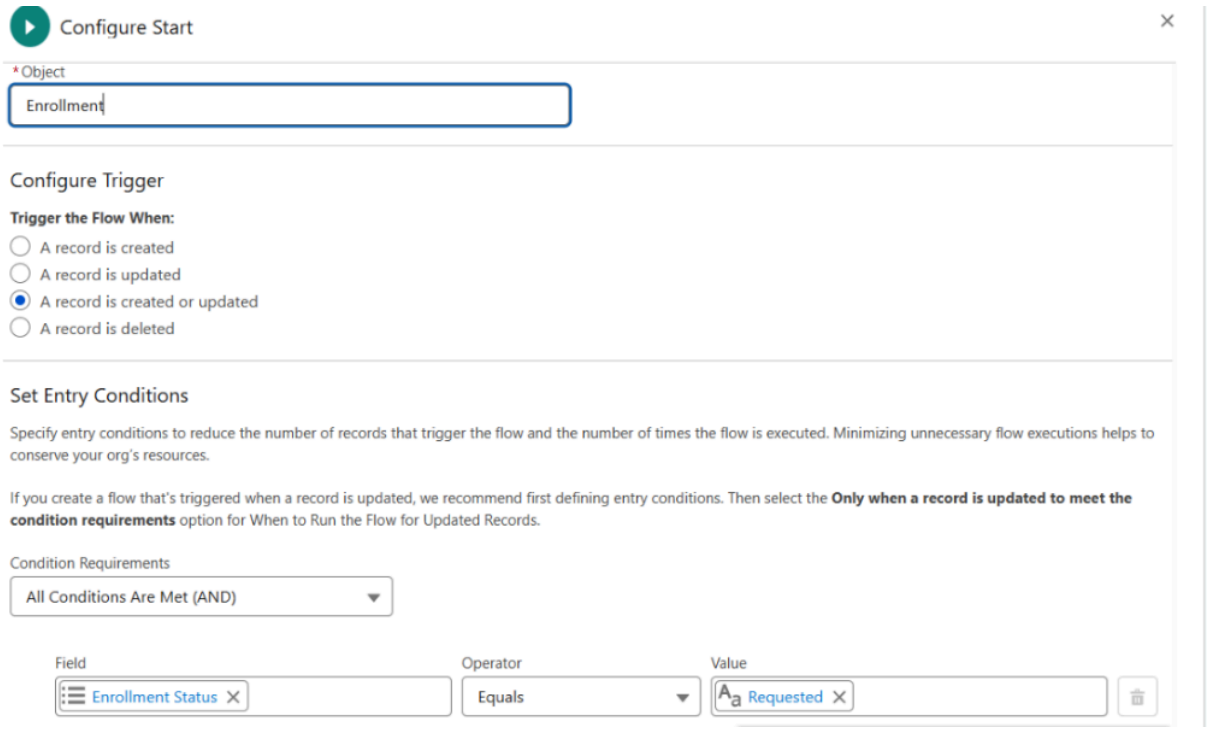

Description

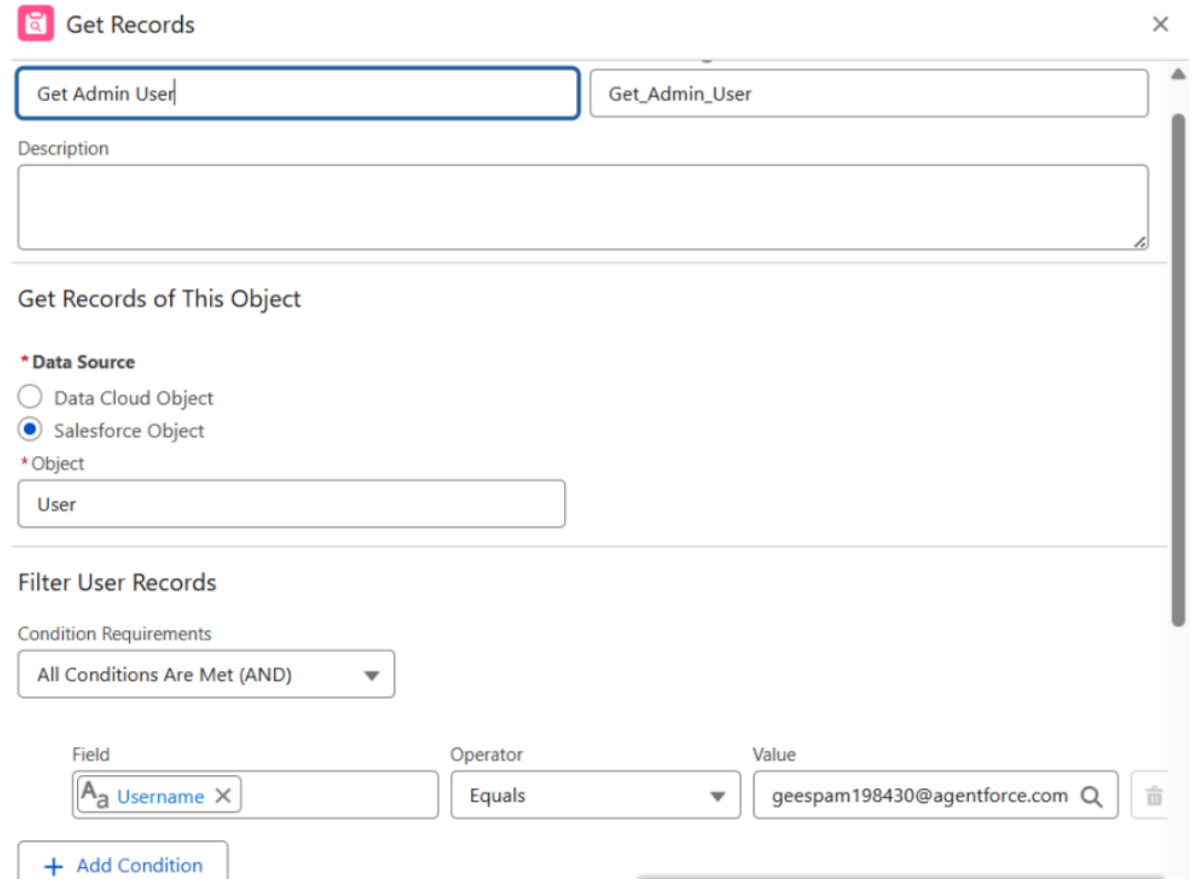

When Enrollment is “Requested”, create a follow-up task for Admin.

Steps:

1.Create Record-Triggered Flow on Enrollment__c.

2.Trigger: Record created or updated; condition Enrollment_Status__c = "Requested".

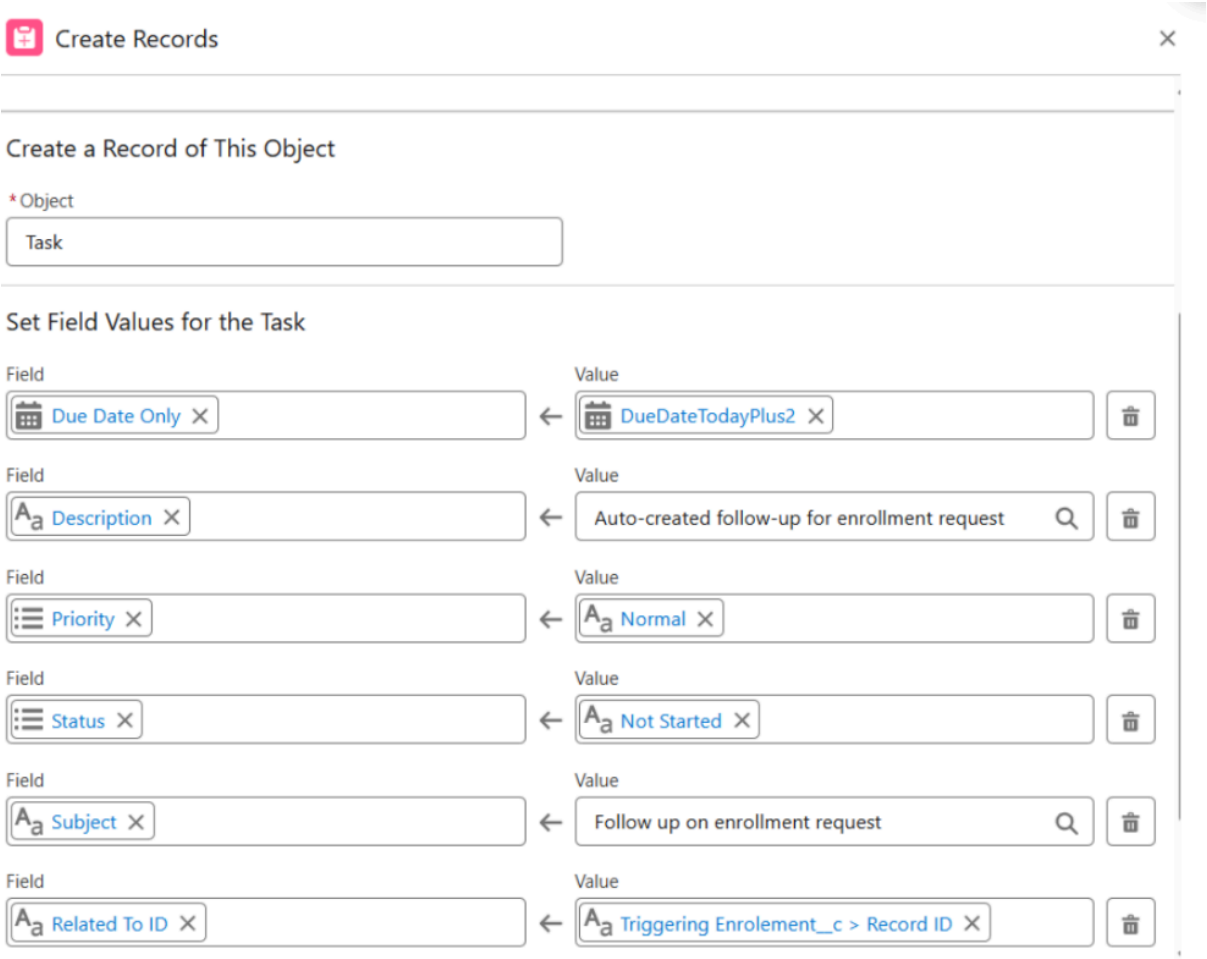

1.Add Create Records for Task:

2.Subject: Follow up on enrollment request.

3.OwnerId: Admin user Id.

4.WhatId: Enrollment Id.

5.ActivityDate: formula Today + 2.

10.Save as Create_Followup_Task → Activate.

Reports:

Description

Reports in Salesforce are used to **analyze, monitor, and present data** in a structured and meaningful way. In this project, reports provide insights into student enrollments, course performance, and instructor assignments, helping users make informed decisions.

Reports are designed using standard and custom report types to display real-time data stored in the system. They help administrators and users track key metrics, identify trends, and evaluate the overall performance of the application.

- **Create “Students by Status” Report:**

Description:

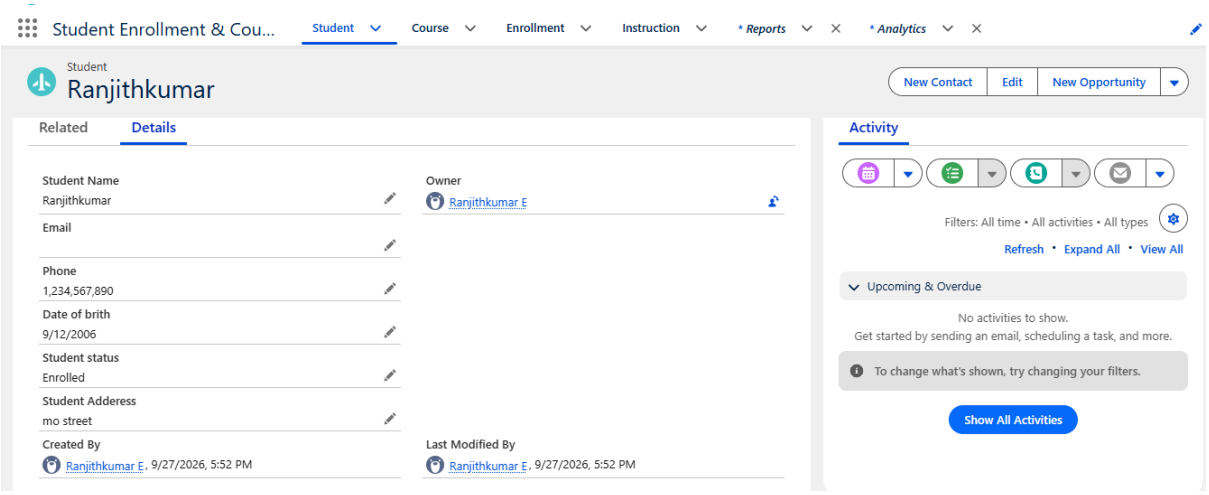

1.Go to **Reports** → **New Report**.

2.Report Type: Students.

3.Group rows by Status__c.

4.Add columns as needed (Name, Email, Phone).

5.Save as Students by Status

- **Create”Enrollment by Course”Report**

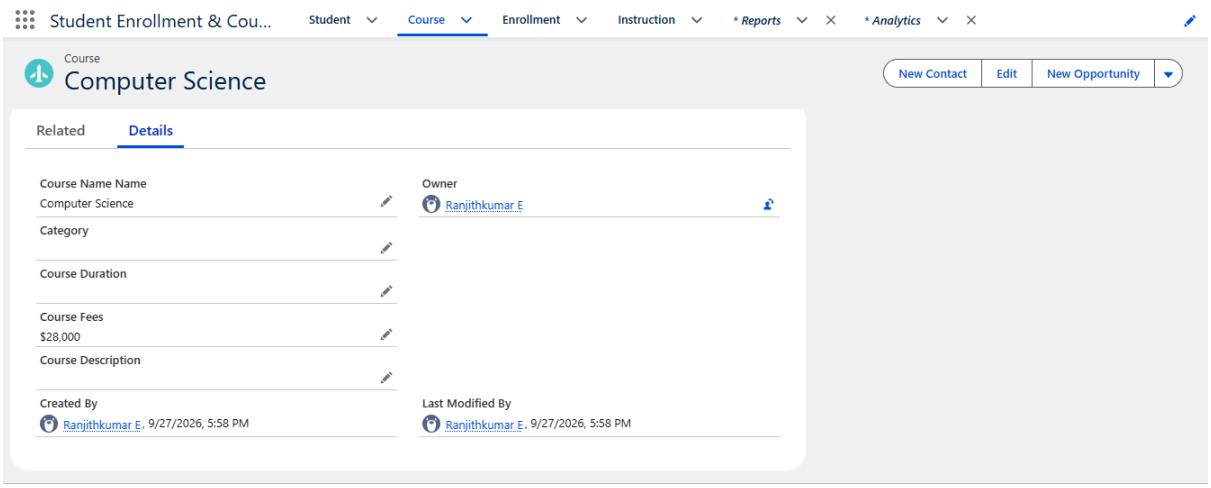

Description:

1.New Report → Report Type: Enrollments.

2.Grouprows by Course__r.Name.

3.Show Record Count per course.

4.Save as Enrollments by Course

- **“Pendind Enrollment Approval”Reports:**

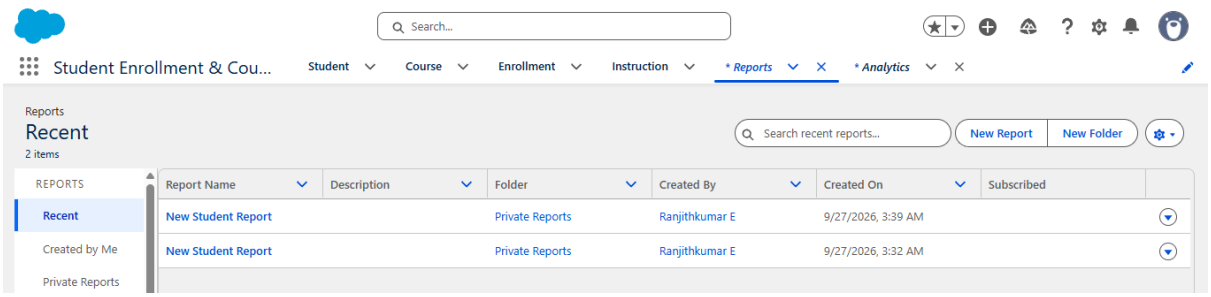

Description

1.New Report → Enrollments report type.

2.Filter: Enrollment_Status__c = "Requested".

3. Add columns (Student, Course, Owner, Created Date).

4. Save as Pending Enrollment Approvals.

- **Create”Revanue Report (Fees Paid)”Report:**

Description:

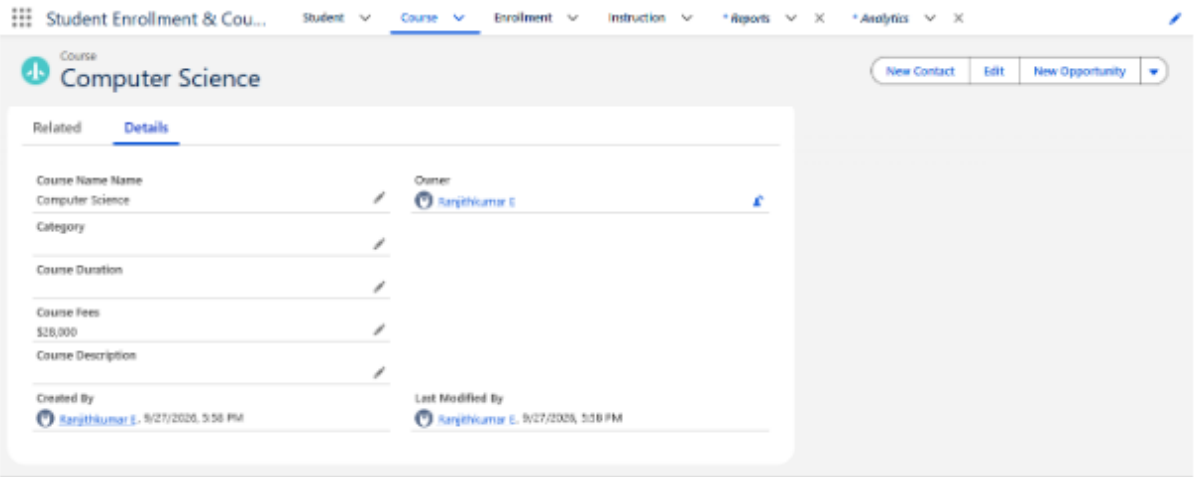

1.New Report → Enrollments report type.

2.Filter: Fees_Paid__c = TRUE.

3.Group by Course__r.Name.

4.Summarize Course_Fee__c or similar fee field.

5.Save as Revenue Report – Fees Paid.

Dashboards:

Description:

Dashboards in Salesforce provide a **visual and real-time overview** of key business metrics using charts, tables, and gauges. In this project, dashboards are used to monitor student enrollment performance, course utilization, and instructor workload at a glance.

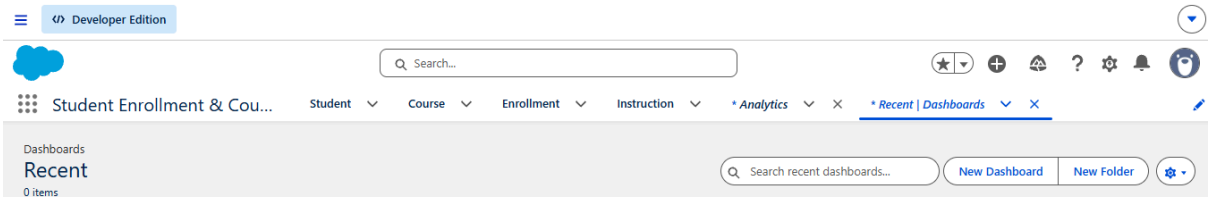

Dashboards consolidate data from multiple reports into a single screen, enabling users to quickly understand system status and trends without navigating through individual records or reports.

- **Create "Student Management Dashboard"**

Description:

Go to **Dashboards** → **New Dashboard**.

Name: Student Management Dashboard.

1.Select folder → **Create**.

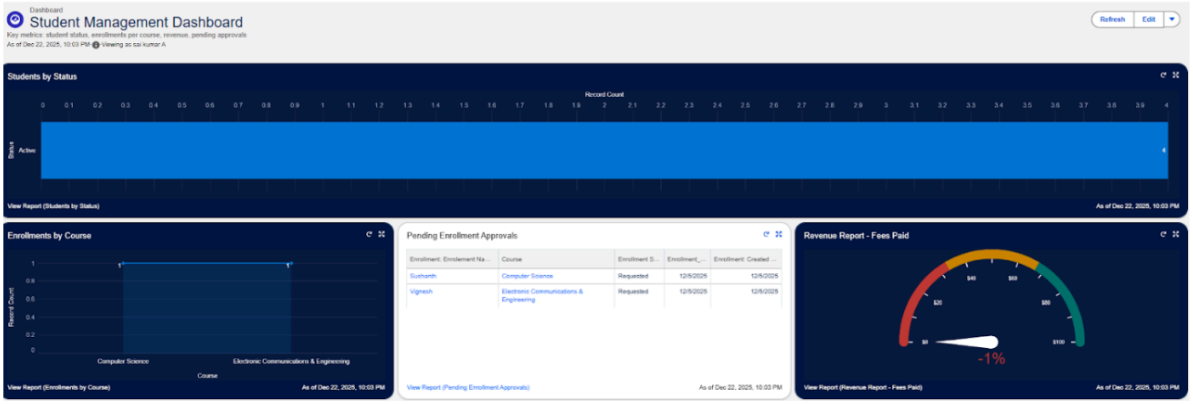

2.Select new Dashboard folder and Save.

3.Add components:

- **Donut Chart** → using Students by Status report.
- **Bar Chart** → using Enrollments by Course report.

- **Gauge** → using Revenue Report – Fees Paid (sum of revenue field).
- **Table** → using Pending Enrollment Approvals report.

  Arrange components on canvas.

Click **Save** → **Done**.

Security Setup:

Description:

Security setup in Salesforce is implemented to ensure that **data is protected**, **access is controlled**, and users can interact with the system only within their authorized scope. In this project, a role-based security model is configured to maintain confidentiality, integrity, and compliance.

The security configuration ensures that sensitive student, course, and enrollment data is accessible only to authorized users while preventing unauthorized viewing or modification.

- ## Configure Profiles

Description:

1.Go to Setup → Profiles → New (or CloneProfiles Required: Admin – Full access. Enrollment Officer – Create/Update Enrollments. Instructor – Read-only access to assigned Enrollments.

2.Steps (example for Enrollment Officer fName: Enrollment Officer.

3.In Object Settings: Enrollment__c: Read, Create, Edit. Student__c / Course__c: Read (and Edit if required).

4.Save.

Repeat similarly for **Instructor** profile with **Read-Only** on Enrollments

- ## Create permission Sets:

Description:

1.Go to **Setup** → **Permission Sets** → **New**.

2.Create Custom Object Access (additional access to project objects if needed).

3.Create Dashboard Editor (Create/Customize Reports & Dashboards permissions).

4.Assign to relevant users.

- ## Configure Sharing & OWD:

Description:

1:Go to **Setup** → **Sharing Settings**.

2.Set **Organization-Wide Defaults**:

- **Students (Student__c):** Public Read/Write.
- **Courses (Course__c):** Public Read/Write.
- **Enrollments (Enrollment__c):** Private.

3.Save

For Instructor access to assigned Enrollments, optionally:

- Add a **User lookup** on Enrollment (Instructor User).

- Use a simple **Record-Triggered Flow** to set **OwnerId = Instructor User** so they can see only their own records.
-

Add a **User lookup** on Enrollment (Instructor User).

Use a simple **Record-Triggered Flow** to set **OwnerId = Instructor User** so they can see only their own records.

Conclusion:

Description:

The Salesforce Student Enrollment & Course Management System successfully streamlines the entire student academic lifecycle—from student registration and course creation to enrollment management, instructor assignment, approvals, revenue tracking, and reporting. By leveraging Salesforce's automation tools such as validation rules, flows, approval processes, and dashboards, the system improves data accuracy, operational efficiency, and decision-making. This project demonstrates how Salesforce can transform manual academic processes into a scalable, reliable, and user-friendly digital solution.

Thank You
